(Assistant Professor Worawan Bhanthumnavin, Ph.D.)

**สุระศักดิ์ ศรีสุขพลรักษ์ : สารแสดงฤทธิ์ทางชีวภาพของส่วนสกัดที่มีขี้จากลำต้น  
พะยุง (Bioactive compounds of the polar extracts from the stems of *Dalbergia  
cochinchinensis*) อ. ทิปรีกษา : ผศ. ดร. สันติ ทิพยางค์, 162 หน้า**

ISBN 974-17-0212-4

การศึกษาองค์ประกอบทางเคมีและฤทธิ์ทางชีวภาพของส่วนสกัดเอทิลอะซิเตตจากลำต้น  
พะยุง สามารถแยกสารใหม่ได้ 1 ชนิด คือ 5,7-dihydroxy-4'-methoxyisoflavonequinone (13)  
และสารที่เคยพบแล้วอีก 12 ชนิด ได้แก่ genistein (1), calycosin (2), pratensein (3),  
tectorigenin (4), formononetin (5), secundiflorol H (6), claussequinone (7), 5,7,3',5'-  
tetrahydroxyflavanone (8), naringenin (9), liquiritigenin (10), soliquiritigenin (11) และ  
bowdichione (12) สูตรโครงสร้างของสารชนิดใหม่สามารถหาได้ด้วยวิธีการทางสเปกโทรสโคปี  
และ เปรียบเทียบข้อมูลกับสารที่เคยพบแล้วแบบเดียวกัน และยืนยันด้วย single crystal x-ray  
diffraction

ในการทดสอบฤทธิ์ทางชีวภาพ ได้มีการทดสอบฤทธิ์ antioxidant ของสารที่แยกได้ด้วยวิธี  
ต่างๆ อันได้แก่ ฤทธิ์ต้านอนุมูลอิสระ และ อนุมูล superoxide โดยเปรียบเทียบกับ BHA  
(antioxidant ในทางการค้า) ผลการทดสอบฤทธิ์ทางชีวภาพของสารที่แยกได้พบว่า สาร 8 มีฤทธิ์  
ต้านอนุมูลอิสระต่อ DPPH ( $IC_{50}$  0.080 mM) สูงสุดของสารที่แยกได้ทั้งหมด ในขณะที่ สาร 2, 3  
และ 6 มีฤทธิ์ต้านอนุมูลอิสระต่อ DPPH ( $IC_{50}$  0.530, 0.620 และ 0.415 mM) ปานกลาง อย่างไรก็ตาม  
ตาม สาร 3, 12 และ 13 ยังแสดงฤทธิ์ยับยั้ง superoxide anion radical ( $IC_{50}$  8.00, 1.55 และ  
1.40  $\mu$ M) สูงกว่า BHA ( $IC_{50}$  9.50  $\mu$ M) นอกจากนี้ สาร 5 และ 11 ยังแสดงความเป็นพิษปาน  
กลางต่อ KB cell lines ( $IC_{50}$  9 และ 8  $\mu$ g / ml)

## 4372465423 : MAJOR CHEMISTRY

KEY WORD : *Dalbergia cochinchinensis* / BIOACTIVE COMPOUND / ANTIOXIDANT

**SURASAK SEESUKPHRONRARAK : BIOACTIVE COMPOUNDS OF THE POLAR EXTRACTS FROM THE STEMS OF *Dalbergia cochinchinensis*.**

THESIS ADVISOR : ASST. PROF. SANTI TIP-PYANG, Ph.D., 162 pp.

ISBN 974-17-0212-4

The investigation for chemical constituents and their biological activity from crude ethyl acetate extract of *Dalbergia cochinchinensis* led to the isolation of one new compound, 5,7-dihydroxy-4'-methoxyisoflavonequinone (13), as well as twelve known compounds, genistein (1), calycosin (2), pratensein (3), tectorigenin (4), formononetin (5), secundiflorol H (6), claussequinone (7), 5,7,3',5'-tetrahydroxyflavanone (8), naringenin (9), liquiritigenin (10), isoliquiritigenin (11) and bowdichione (12). The structure of the new compound was determined by spectroscopic method, comparison the data with the same type of known compounds, and confirmed by single crystal x-ray diffraction.

In biological activity, the isolated compounds were evaluated by various antioxidant assays, including free radicals and superoxide anion radical scavenging activities by comparison with BHA (commercial antioxidant). The biological activity results indicated that compound 8 showed highest free radical scavenging activity on DPPH ( $IC_{50}$  0.080 mM) among the isolated compounds while compound 2, 3 and 6 showed moderate activity ( $IC_{50}$  0.530, 0.620 and 0.415 mM). However, compound 3, 12 and 13 showed more potent superoxide anion radical scavenging activity ( $IC_{50}$  8.00, 1.55 and 1.40  $\mu$ M) than BHA ( $IC_{50}$  9.50  $\mu$ M). In addition, compound 5 and 11 also showed moderate in vitro cytotoxicity against KB cell lines ( $IC_{50}$  9 and 8  $\mu$ g / ml)

## ACKNOWLEDGEMENT

The author would like to express his appreciation to his advisor, Assistant Professor Dr. Santi Tip-pyang for his assistance and encouragement in conducting this research. He wished to thank the members of his thesis committee, Professor Dr. Udom kokpol, Professor Dr. Padet Sidisunthorn and Assistant Professor Dr. Worawan Bhanthumnawin for their valuable discussion and advice. He would like to acknowledge Miss. Pongpun Siripong (Natural Products Research Section, Research Division, National Cancer Institute, Thailand) for testing cytotoxic activity against KB cell lines and Dr. Thammarat Aree for obtaining and suggestion on single crystal X-ray diffraction technique.

Special appreciation is expressed to the staff of the Natural Products Research Unit, Department of Chemistry, Chulalongkorn University, for the support of chemicals and laboratory facilities throughout the course of study. Moreover, thanks are extended to the Faculty of science and Graduate School of Chulalongkorn University for financial support.

He would also like to express his appreciation to his family for their great support and encouragement throughout the course of his education and finally his thanks to all of his friends for their friendship and help during his graduate studies.
