

Chapter VII

RECOMMENDATIONS FOR FUTURE WORK.

The present project was a study of the coagulation with ferrous sulphate in the treatment of various types of waters. This work might be regarded as preliminary study the ferrous sulphate as a coagulant.

Some suggestions for future work which might be carried out in the future are as follows :

1. A study of coagulation at the optimum ferrous sulphate dose for various velocity of mixing.
2. A study of coagulation at the optimum dose for various time of mixing.
3. Further study, the operation of a pilot water treatment plant for a optimum dose, pH, velocity of mixing and optimum time of mixing to be considered.
