VITA

Mr. Yongphan Vimuktanandana graduated from chulalongkorn University in 1965 with a Bachelor Degree in Civil Engineering. After graduation he joined the Metropolitant Electricity Authority as a professional civil engineer, but left it a year after when he was admitted to Chulalongkorn University Graduate School to study for the Degree of Master of Engineering in Sanitary Engineering.

APPENDIX A

Table A-1 : BASIC DATA OBTAINED FROM AERATION EXPERIMENTS

t min.	Temp. °C	C_s^* mg./l	C_1 mg./l	$C_s - C_1$ mg./l	Power watt-hr.
0	26.2°	7.97	3.09	4.88	-
5	26.2°	7.97	4.70	3.27	54.5
10	26.2°	7.97	4.96	3.01	109
20	26.2°	7.97	5.71	2.26	218
40	26.2°	7.97	7.13	0.84	436
60	26.0°	7.99	7.84	0.51	650
90	26.0°	7.99	7.69	0.30	977

NOTE : Conditions of Experiments

1. Rotor No. 1
of
2. Depth/Immersion = 5.0 cm.
3. RPM = 30
4. Power consumption

* Values of C_s Were taken from new values of oxygen saturation recommended by the American Society of Civil Engineering (1969) and corrected for chloride.

Table A-2: BASIC DATA OBTAINED FROM AERATION EXPERIMENTS

t min.	Temp. °C	C_s^* mg./l	C_1 mg./l	$C_s - C_1$ mg./l	Power watt-hr.
0	24.8°	8.19	0.65	7.54	-
5	24.8°	8.19	2.42	5.77	56
10	24.8°	8.19	3.85	4.34	112
20	24.8°	8.19	5.42	2.77	224

1. Rotor No. 2
2. Depth of Immersion = 5.0 cm.
3. RPM = 100

SAMPLE CALCULATION

TABLE B-1 Sample Computation (from Table A-24) for K_{La_T} ,

$K_{La_{20^\circ C}}$ and Pearson's r

Time (min.) = X	$C_s - C_1$ mg/L	$\log(C_s - C_1)$ = Y
0	7.711	0.88705
2	4.233	0.62634
4	2.668	0.42488
6	1.726	0.23553
8	1.161	0.06446

$$n = 5$$

$$\epsilon_K = 20$$

$$\sum k^2 = 120$$

$$\Sigma Y = 2.23826$$

$$\epsilon_{X,Y} = 4.888106$$

$$\text{from 5} \quad A + 6 B = 0.244053 \quad \dots\dots\dots (6)$$

$$(5)-(6) \quad \therefore \quad -2B = 0.203599$$

$$B = -0.1017995$$

$$K_{La(T)} = \frac{0.1017995}{0.4343} = 0.238665 \text{ (min}^{-1}\text{)}$$

average temperature = 21.8°C

$$\text{and } K_{\text{La}20^\circ\text{C}} = \frac{K_{\text{LaT}} \cdot \theta^{(20-T)}}{0.248665 \times 1.024}$$

$$= 0.248665$$

$$\frac{1.024}{1.024} \quad 1.8$$

$$= 14.297 \quad (\text{hr}^{-1})$$

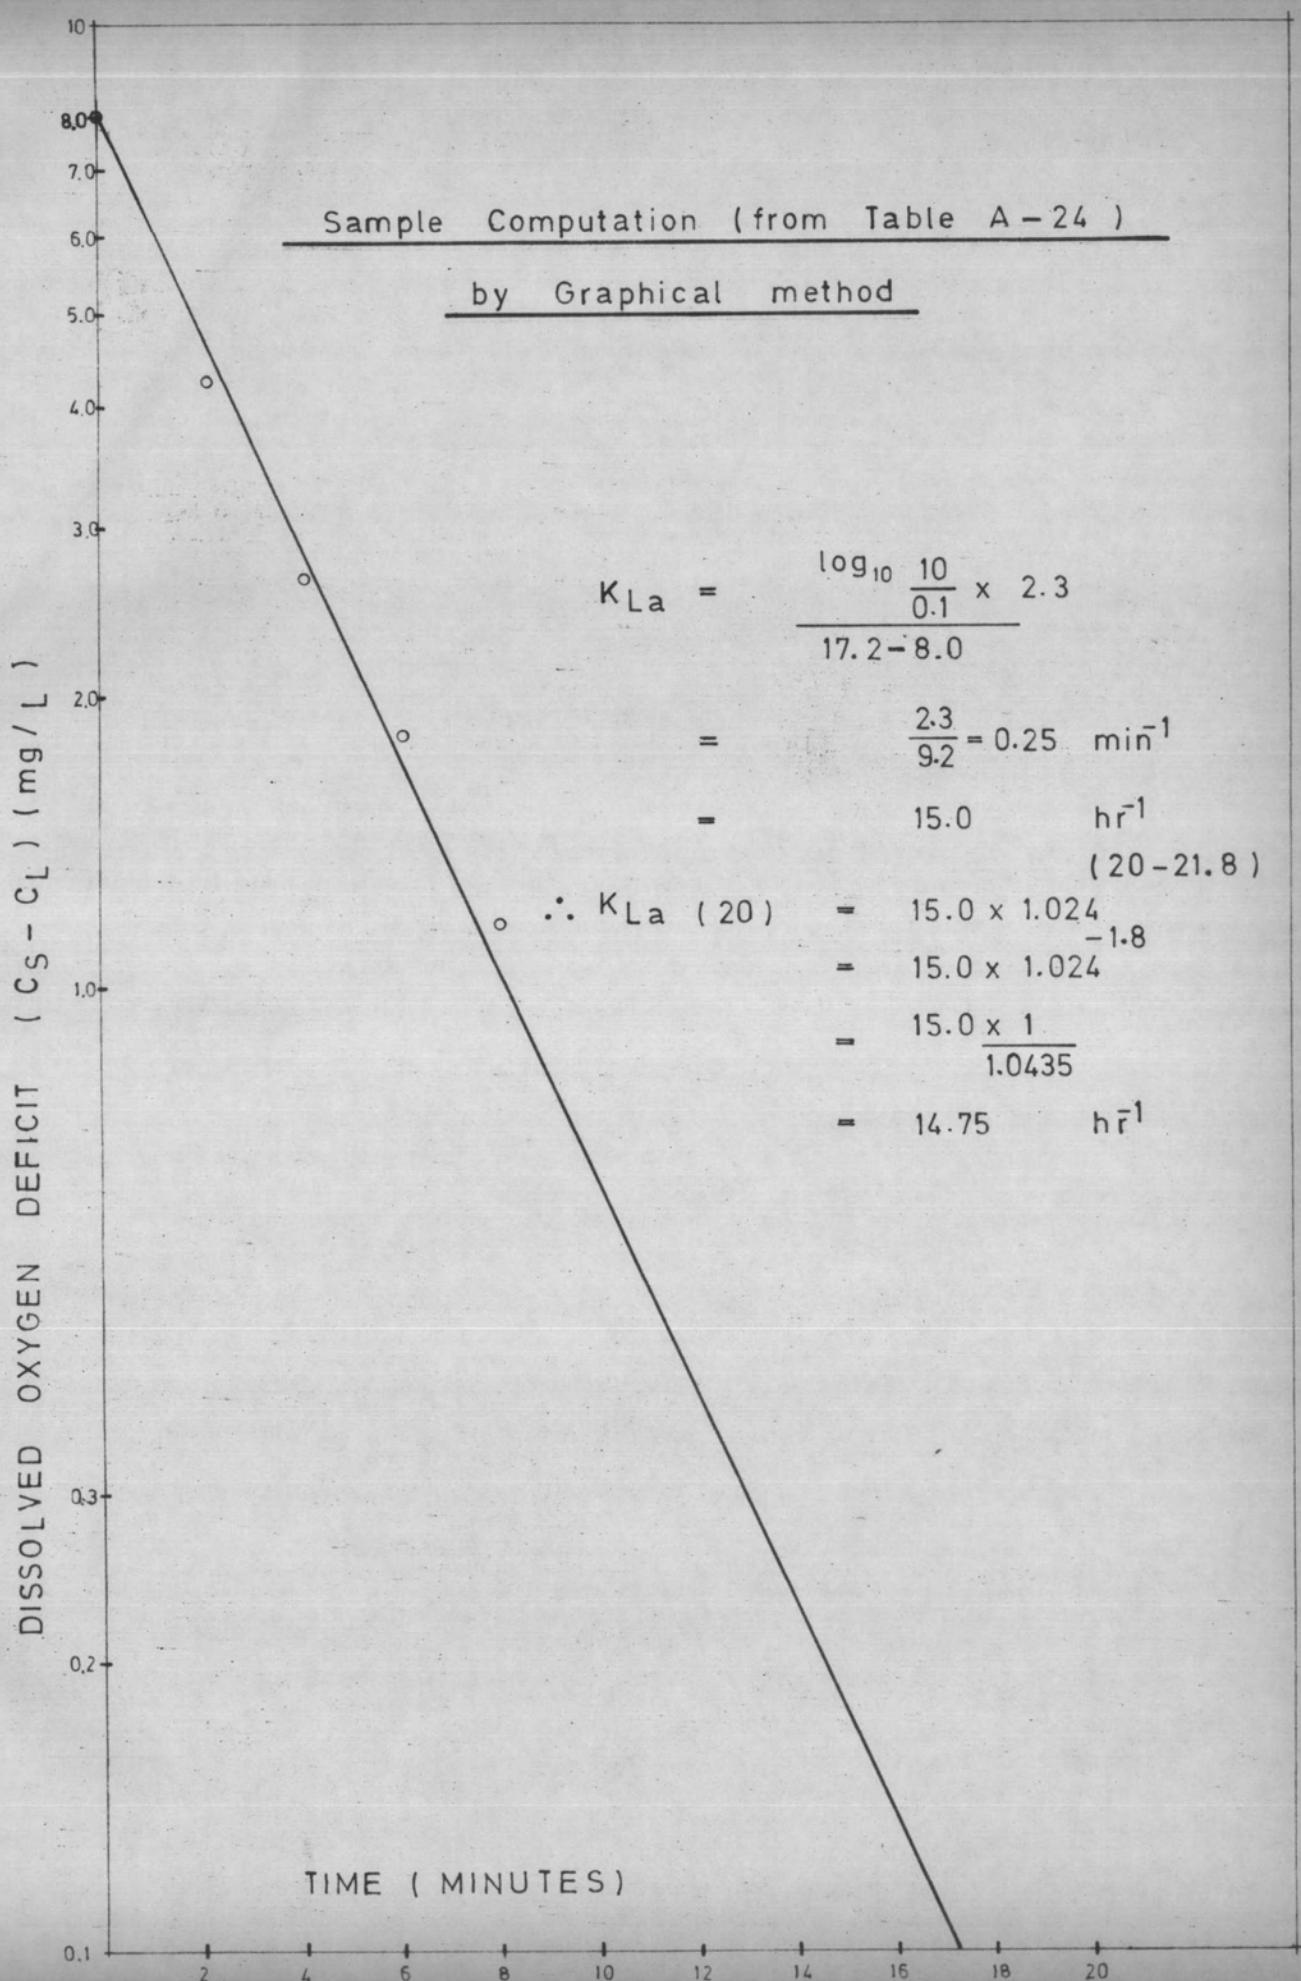

$$= \frac{N \cdot \bar{X} \cdot \bar{Y} - (\bar{X})(\bar{Y})}{\sqrt{[N \cdot \bar{X}^2 - (\bar{X})^2][N \cdot \bar{Y}^2 - (\bar{Y})^2]}}$$

and	$N \cdot \Sigma X \cdot Y$	=	24.405300
	$\Sigma X \cdot \Sigma Y$	=	44.765200
	$N \cdot \Sigma X^2$	=	600
	$(\Sigma X)^2$	=	400
	$N \cdot \Sigma Y^2$	=	7.096560
	$(\Sigma Y)^2$	=	5.009808

substitute in (7) we get.

$$\begin{aligned} r &= \frac{24.405300 - 44.765200}{\sqrt{(600-400)(7.096560-5.009808)}}^{\frac{1}{2}} \\ r &= \frac{-20.35990}{\sqrt{(200)(2.086752)}}^{\frac{1}{2}} \\ &= \frac{-20.35990}{\sqrt{417.35024}}^{\frac{1}{2}} \\ &= \frac{-20.35990}{20.427} \\ &= -0.996715 \end{aligned}$$

If $n = 5$, degrees of freedom, $df = (5-2) = 3$ and with level of significance of 0.1 percent, r should at least be equal to 0.9916. An r value of 0.9967 therefore indicates that a straight line relationship between $\log(c_s - c_L)$ and (t) is real or significant and not due to chance.

APPENDIX C

TABLE C - 1 : Pearson r and level of significance of $K_{La(20)}$ for specified aeration operational conditions (RPM and depth of immersion) for Rectangular Rotor NO. 1

Rotor speed RPM	Blade immersion cm.	$K_{La(20)}$ hr^{-1}	Pearson r	level of significance %
60	5.0	3.782	0.9895	99.0
