

## RECOMMENDATIONS FOR FUTURE WORKS

It is hoped that this review of the problem will give some direction to further studies. From the results obtained in this research, the following items of future works are recommended.

1. To study the respiration of the micro - organisms during various growth phases in order to find oxygen requirements.
2. Measure the oxygen uptake rate in order to compute oxygen utilization and sludge growth.
3. Another methods instead of flotation should be used to eliminate fat in dairy wastes such as coagulation.
4. The other aeration devices should be used instead of porous diffusers.
5. To study the microbial sludge employed in bio - oxidation processes.
