APPENDICES

Appendix A Pellet Profiles

Surface profilometry (Surtronic 25 and dial indicator) was used to determine the roughness of pellet surfaces and to measure the extent of dissolution; in order to calculate the volume loss. The commercial plaster pellets were assumed as a paraboloid form while other materials were used the actual profile to calculate.

Appendix B Thermophysical Properties of Water

Since our experiment carried out at different temperature, thermophysical properties of water were used to calculate Reynold number (Re) and Schmidt number (Sc), which led to determine the correlation of jet apparatus. The tabulated properties are pressure (P), density (ρ), enthalpy (H), entropy (S), isochoric heat capacity (C_v), isobaric heat capacity (C_p), speed of sound (u), viscosity (η), and thermal conductivity (Λ).

Table B1 Thermophysical Properties of Water (CRC Handbook, 2011)

T °C	P MP a	ρ kg/m ³	H kJ/kg	S kJ/kg K	C_v kJ/ kgK	C_p kJ/kg K	u m/s	η μ Pas	Λ mW/ mK
20	0.1	998.2	84.0	0.3	4.2	4.2	1482.3	1001.6	598.6
25	0.1	997.1	104.9	0.4	4.1	4.2	1496.7	890.0	607.2
30	0.1	995.7	125.8	0.4	4.1	4.2	1509.2	797.2	615.5
40	0.1	992.2	167.6	0.6	4.1	4.2	1528.9	652.7	630.6

Appendix C Diffusion at Infinite Dilution

The diffusivities of materials were used to calculate Reynolds number (Re) in these experiments. The diffusion coefficient for a salt, D_{salt} , may be calculated from the D^+ and D^- values of the constituent ions by the relation;

$$D_{\text{salt}} = \frac{(z_+ + |z_-|)D_+D_-}{z_+D_+ + |z_-|D_-}$$

where z is charge on the ion.

Table C1 Diffusion at Infinite Dilution (CRC Handbook, 2011)

Ion	D $10^{-5}\text{cm}^2\text{s}^{-1}$	Ion	D $10^{-5}\text{cm}^2\text{s}^{-1}$	Ion	D $10^{-5}\text{cm}^2\text{s}^{-1}$

Bromobenzoate ⁻	0.799	Cyanoacetate ⁻	1.156

Appendix D Transformations of the coordinates

The dissolution areas of this study were calculated Surface Integrals area; follow by this equation;

$$\iint_S f(x, y, z) ds = \iint_d f((x, y, z(x, y))) \sqrt{\left(\frac{\partial z}{\partial x}\right)^2 + \left(\frac{\partial z}{\partial y}\right)^2 + 1} dA \quad (D-1)$$

Thus a cylindrical coordinate system and Cartesian coordinate system are observed (Welty et al., 2007);

$$\left(\frac{\partial}{\partial z}\right)_{cyl} = \left(\frac{\partial}{\partial z}\right)_{cart} \quad (D-2)$$

whereas, from the chain rule

$$\left(\frac{\partial}{\partial x}\right) = \frac{\partial}{\partial r} \frac{\partial r}{\partial x} + \frac{\partial}{\partial \theta} \frac{\partial \theta}{\partial x} \quad (D-3)$$

thus

$$\left(\frac{\partial}{\partial x}\right) = \cos\theta \left(\frac{\partial}{\partial r}\right) - \frac{\sin\theta}{r} \left(\frac{\partial}{\partial \theta}\right) \quad (D-4)$$

In similar manner,

$$\left(\frac{\partial}{\partial y}\right) = \frac{\partial}{\partial r} \frac{\partial r}{\partial y} + \frac{\partial}{\partial \theta} \frac{\partial \theta}{\partial y} \quad (D-5)$$

where

$$\left(\frac{\partial r}{\partial y}\right) = \frac{y}{r} = \sin\theta \quad \text{and} \quad \frac{\partial \theta}{\partial y} = \frac{1}{x \sec^2 \theta} = \frac{\cos\theta}{r}$$

Thus, $(\partial/\partial y)$ becomes

$$\left(\frac{\partial}{\partial y}\right) = \sin\theta \left(\frac{\partial}{\partial r}\right) + \frac{\cos\theta}{r} \left(\frac{\partial}{\partial \theta}\right) \quad (D-5)$$

So Equation D-1 becomes

$$\text{Area} = \int_0^\theta \int_0^r \left[\sqrt{\left(\cos\theta \frac{dz}{dr} - \frac{1}{r} \sin\theta \frac{dz}{d\theta}\right)^2 + \left(\sin\theta \frac{dz}{dr} + \frac{1}{r} \cos\theta \frac{dz}{d\theta}\right)^2 + 1} \right] r dr d\theta \quad (D-6)$$

where z is the depth at r position and θ is angle at r position.

CURRICULUM VITAE

Name: Ms. Thanutchaphorn Phupongskorn

Date of Birth: July 11, 1988

Nationality: Thai

University Education:

2006–2010 Bachelor Degree of Chemical Engineering, Faculty of Engineering, King Mongkut's University of Technology North Bangkok, Bangkok, Thailand

Work Experience:

2009	Position:	Engineer Internship Student
	Company:	Fuji Shinsei Co., Ltd, Pathumtani, Thailand
2011-2012	Position:	Research Assitant
	Company name:	Nuclear Group, University of New Brunswick, Fredericton, New Brunswick, Canada

Presentations:

1. Thanutchaphorn P., Lister, D.H., Steward, F.R., and Rirksomboon, T. (2012, April 24) Determination of Dissolution of a Material with a Moderately-rapid Dissolution Rate. Poster presented at The 3th Research Symposium on Petroleum, Petrochemicals, and Advanced Materials and the 18th PPC Symposium on Petroleum, Petrochemicals, and Polymers, Bangkok, Thailand.
