## บทคัดย่อ

สุวรรณ เลิศสกุลบรรลือ : การแพร่ตัวของพอลิสไตรีนลาเท็กซ์ในสารละลายไฮดรอกซีโพรพิลเซลลูโลส ศึกษาโดยใช้เทคนิคการกระจายของแสงแบบไดนามิกส์ และ การวัดความหนืด (Diffusion of Polystyrene Latexs in Hydroxypropylcellulose Studied by Dynamic Light Scattering and Viscometry) อ.ที่ปรึกษา: ศาสตราจารย์ อเล็กซานเดอร์ เอ็ม เจมสัน (Prof. Alexander M. Jamieson) และ รศ.ดร. อนุวัฒน์ ศิริวัฒน์, 56 หน้า, ISBN 974-633-603-7

สัมประสิทธิ์การแพร่ตัวของพอลิสไตรีนลาเท็กซ์ (PS) ในสารละลายไฮดรอกซีโพรพิลเซลลูโลส (HPC) ถูกศึกษาโดยใช้เทคนิคการกระจายแสงแบบไดนามิกส์ และ การวัดความหนืดสาย HPC จะดูคชับบนพื้นผิวของลาเท็กซ์ และในกรณีของลาเท็กซ์ขนาดเล็ก และ HPC สายยาว, กลไกการเชื่อมต่อกัน (Bridging mechanism) สามารถตรวจสอบได้ เมื่อเซอร์แฟคแทนท์ชนิดไม่มีประจุ (ไดตรอน เอ็กซ์-100) ได้ถูกเติมลงไป แรงอันตรกิริยาระหว่าง HPC และลาเท็กซ์จะลดลง ณ 0.1 % โดยน้ำหนักของไดตรอน เอ็กซ์-100 การดูคชับบน HPC บนลาเท็กซ์ถูกยับยั้งอย่างสมบูรณ์ ในงานวิจัยนี้มีการหาค่าสัมประสิทธิ์การแพร่ของลาเท็กซ์เพื่อศึกษาผลกระทบของความเข้มข้นของเซอร์แฟคแทนท์, ความเข้มข้นของพอลิเมอร์ในมวลโมเลกุลที่ต่างกัน 3 ค่า และ ขนาดของลาเท็กซ์ที่ต่างกัน 3 ขนาด สเกลของการเปลี่ยนแปลงตามความเข้มข้นอยู่ในช่วง 0.5-0.8 ขึ้นอยู่กับแรงอันตรกิริยาระหว่างอนุภาคภายในระบบ

## ABSTRACT

## 942014 : MAJOR POLYMER SCIENCE

Self diffusion coefficient of polystyrene (PS) spheres in hydroxypropyl cellulose (HPC) solution was studied by using the dynamic light scattering and viscometry techniques. HPC chains tend to adsorb on the PS surface, and in the case of small sphere and long chain length of HPC, a bridging mechanism can be observed. When a nonionic surfactant, Triton X-100, is added, the interaction between HPC and PS is reduced. At 0.1 % wt. of Triton X-100, the adsorption of HPC on PS is completely inhibited. In this work, the diffusion coefficient of PS was measured to investigate the effects of Triton X-100 concentration, polymer concentration, molecular weights of HPC, and sizes of latex sphere. The exponent values of the stretched exponential function were also determined.  $\delta$  varies from 0.5-0.8 depending on the interaction between the particles in the system.

## ACKNOWLEDGMENTS

This thesis would never have been completed without the help and support of many people and organizations who are gratefully acknowledged here. The author would like to express appreciation to USAID for providing the student exchange scholarships through the University Development Linkage Project (UDLP) funding. She would like to give sincere thanks to the National Metal and Material Technology Center (MTEC) for their generosity in permitting the use of their dynamic light scattering instrument.

She would like to give special thanks to her research advisor, Prof. Alexander M. Jamieson who originated her thesis and gave valuable suggestions. She is deeply indebted to Assoc. Prof. Anuvat Sirivat, her co-advisor, for his suggestion, proof-reading and gave her the opportunity to present her work in Newton Institute DSM Research Symposium, “Rheology/Chain Structure Relationships in Polymers” at Issac Newton Institute for Mathematic Sciences, University of Cambridge, England. She also greatly appreciates her thesis committee member, Assoc. Prof. Kanchana Trakulcoo. Her thanks also go to all of her friends for their encouragement. She wishes to thank all of the staffs of the Petroleum and Petrochemical College for providing all facilities needed in her work.

Finally, she would like to express her deep gratitude to her family for their understanding, love and generous encouragement.
