## Appendix A

### Antioxidant activities

Antioxidant activities were important properties of anthraquinones. These may be loss when extraction temperature was high or exposure when contacts to light and some organic solvents. Furthermore, antioxidant activities have related with extraction methods. Some methods may be make anthraquinones degradation. This experiment was investigated to compare the antioxidant activities at the maximum conditions in each method using DPPH method by 1, 2-diphenyl-2-picrylhydrazyl (DPPH) radical against free radicals. The color of DPPH as purple color in ethanol at absorbance 1.235 (about 110  $\mu\text{M}$ ) using spectrophotometer at wavelength of 517 nm as a initial reference sample. The percentage inhibition (PI%) was calculated from reduction absorbance as reaction with DPPH in series at known concentration. The anthraquinones extracts in 3 ml, known concentration, dilute in series with ethanol 1 ml and take solution 1 ml mix with 2 ml DPPH solution. Mixed solution was vertexed and kept in darkness about 2 hours at 37 °C. The color of mixed solution was change when the antioxidant activities were extreme. These show in Figure A-1.

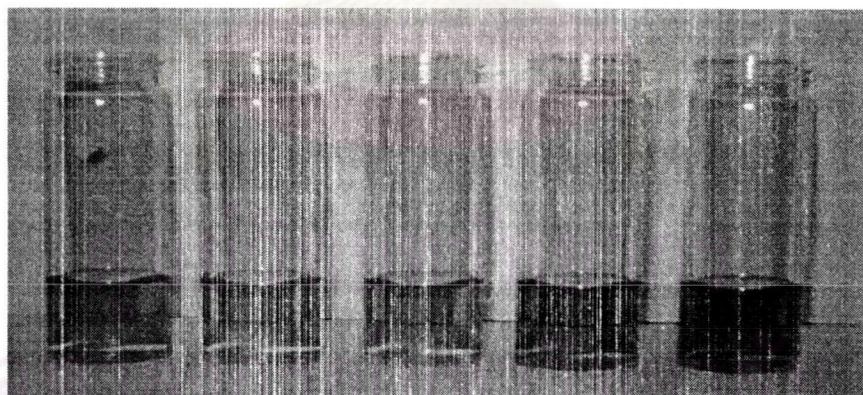

Figure A-1 Antioxidant develop for dilute sample

For example, antioxidant activity using maceration extraction

Conc. (mM)	Abs 3	PI%
0.441	0.75	60.29
0.3308	0.685	55.06
0.2481	0.654	52.57
0.186	0.611	49.12
0.1395	0.599	48.15
0.1047	0.567	45.58
0.0785	0.542	43.57
$IC_{50} = 0.204$	Ref = 1.244	

When plotting the concentration versus PI (%) was determine inhibition concentration at 50% as mean concentration of sample producing 50% reduction of the radical absorbance in Figure A-1. The plotting between PI (%) and concentration gives the fitted equation was  $y = 43.884x + 41.037$  which gives  $IC_{50}$  was 0.204 mM

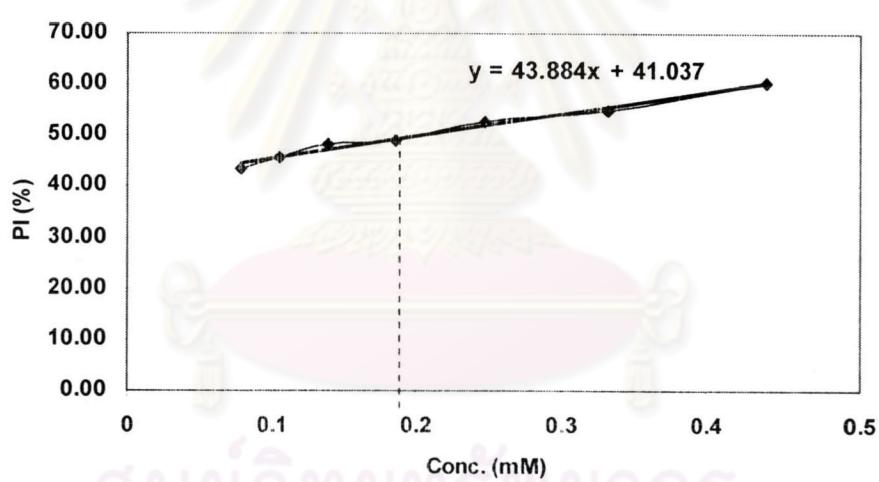

Figure A-1 Sample of  $IC_{50}$  determination

## Appendix C

### Extraction times and extraction temperatures

#### Maceration extraction

Table C-1 Recovery (%) of Alizarin was operating condition at ambient temperature using ethanol as solvent.

Time (min)	Recovery (%)			Avg. Recovery (%)± std.
15	26.44135	32.90891	27.18447	28.84 ± 3.539
30	31.66506	34.96358	30.37336	32.33 ± 2.367
45	34.92408	35.37415	34.14634	34.81 ± 0.621
60	40.2823	40.59869	40.60773	40.50 ± 0.185
90	43.20988	44.64809	46.28099	44.71 ± 1.537

#### Soxhlet extraction

Table C-2 Recovery (%) of Alizarin was operating condition at ambient temperature using ethanol as solvent.

Time (min)	Recovery (%)			Avg. Recovery (%)± std.
4 hours	97.5269	97.9672	96.8622	97.45 ± 0.556

#### Ultrasound assisted extraction

Table C-3 Recovery (%) of Alizarin was operating condition at extraction temperature at 25 °C and power setting 3 using ethanol as solvent

Time (min)	Recovery (%)			Avg. Recovery (%)± std.
15	34.8341	36.2851	36.4162	35.85 ± 0.878
30	36.3208	41.1765	38.4742	38.66 ± 2.433
45	42.1824	42.0601	42.2735	42.17 ± 0.107
60	42.8808	45.6522	47.469	45.33 ± 2.311
90	49.2188	51.4956	54.2636	51.66 ± 2.526

**Table C-4 Recovery (%) of Alizarin was operating condition at extraction temperature at 45 °C and power setting 3 using ethanol as solvent.**

## Type of solvents and ethanol compositions

### Ultrasound assisted extraction

Table C-10 Recovery (%) of Alizarin was operating condition at extraction temperature at 25 °C, power setting 3 and extraction time 45 minutes using ultrasound assisted extraction.

Type of solvents	Recovery (%)			Avg. Recovery (%)± std.
Methanol	47.39336	49.07162	46.66667	47.71 ± 1.233
Acetone	57.33788	50.1992	50.80645	52.78 ± 3.958
Ethanol	42.18241	42.06009	42.27353	42.17 ± 0.107
Acetonitrile	50.28377	46.70992	49.76581	48.92 ± 1.931

Table C-11 Recovery (%) of Alizarin was operating condition at extraction temperature at 25 °C, power setting 3 and extraction time 45 minutes using ultrasound assisted extraction.

Ethanol compositions	Recovery (%)			Avg. Recovery (%)± std.
100 %	42.1824	42.0601	42.2735	42.17 ± 0.107
80 %	63.39455	60.29963	63.55014	62.41 ± 1.833
50 %	71.65354	68.79511	70.53345	70.33 ± 1.44
20 %	11.18881	10.90387	11.01695	11.04 ± 0.143

### Microwave assisted extraction

Table C-12 Recovery (%) of Alizarin was operating condition at extraction temperature at 60 °C, power 60% of 1200 W and extraction time 15 minutes using microwave assisted extraction.

Type of solvents	Recovery (%)			Avg. Recovery (%)± std.
Methanol	88.002704	90.37117	90.322581	89.57 ± 1.354
Acetone	61.876454	64.78873	65.679838	64.12 ± 1.989
Ethanol	56.11737	52.39659	53.789279	54.1 ± 1.880
Acetonitrile	55.362493	50.86837	59.326523	55.19 ± 4.232

Table C-13 Recovery (%) of Alizarin was operating condition at extraction temperature at 60 °C, power 60% of 1200 W and extraction time 15 minutes using microwave assisted extraction.

Ethanol compositions	Recovery (%)			Avg. Recovery (%)± std.
100%	56.11737	52.39659	53.78928	54.1 ± 1.88
80%	95.71559	95.31327	96.70411	95.91 ± 0.716
50%	93.42153	93.68507	93.84131	93.64 ± 0.212
20%	66.9967	70.08453	64.42863	67.17 ± 2.832

### Power

Table C-14 Recovery (%) of Alizarin was operating condition at extraction temperature at 25 °C and extraction time 45 minutes using ethanol as solvent.

Power	Recovery (%)			Avg. Recovery (%)± std.
3	42.18241	42.06009	42.27353	42.17 ± 0.107
6	47.21408	47.8022	45.94595	46.99 ± 0.949
9	50.27624	53.46062	55.75221	53.16 ± 2.75

### Antioxidant activities

Table C-15 Antioxidant activities and percent inhibition of Alizarin using maceration extraction was operated at 37 °C.

## VITA

Mr. Surasak Hemwimon was born on 11 November, 1982 in Bangkok, Thailand. He received a Bachelor's Degree of Chemical Engineering from the Faculty of Engineering, Kasetsart University in 2002. After then he subsequently completed the requirements for a Master's Degree in Chemical Engineering at the Department of Chemical Engineering, Faculty of Engineering, Chulalongkorn University in 2005.
