นักวิจัย : สมบัติภานุกุล : สมบัติภานุกุลของขยะพลาสติกในประเทศไทยสำหรับศักยภาพการรีไซเคิล (PHYSICAL PROPERTIES OF LOCAL PLASTIC WASTE FOR RECYCLING POTENTIAL) อ.ดร. เกริกษณ์ สุกานันท์ 215 หน้า ISBN 974-584-342-3

การศึกษาตามวิถีทางกล และ การเปลี่ยนแปลงสมบัติของเม็ดพลาสติกจากการแยกขยะพลาสติก โครงสร้างของกิจกรรมดูแลการรับจำนำพลาสติกในจังหวัดเชียงใหม่ บริเวณและชนิดของขยะพลาสติกจากห้องประชุมการที่เกี่ยวข้อง 48 แห่ง ขยะพลาสติกในประเทศไทย ภายนอกบรรจุที่สำคัญคือ โพลิเอทิลีนชนิดความหนาแน่นสูง มีการเรียกใช้ใหม่อายุน้อยกว่าสี่สิบปี รองลงมาคือโพลิไพริลีน ประมาณ 13,950 ตันต่อปี พลาสติกที่ผลิตเป็นเม็ดเก่า มีน้ำหนักตัวต่ำกว่าพลาสติกประเภทโพลิเอทิลีน โพลิไพริลีน และ โพลิสไตรีนเท่านั้น

การคาดคะเนคุณภาพการคัดเลือกขยะประเภทต่างๆ โดยเครื่องคิดໄฟอร์เคนซ์ลดตามเกณฑ์มาตรฐานต่อไปนี้ พบว่าอยู่ในเกณฑ์คือ การคาดคะเนการหาคำนวณค่าแรงดึงและกระแทกของพลาสติก พบว่าคำนวณค่าแรงดึงคืนน้อยกว่าสี่สิบของเม็ดพลาสติกเท่าที่หากวนค่าต่ำสุด โพลิเอทิลีนต่ำๆ โพลิสไตรีนต่ำๆ และโพลิไพริลีนต่ำๆ มีค่าต่ำกว่า 94.6 %, 82.9 %, 70.9 %, และ 81.3 % ของคุณสมบัติเริ่มต้น และคำนวณค่าแรงดึงกระแทกน้อยกว่าสี่สิบของเม็ดพลาสติกเท่าที่หากวนค่าต่ำสุด โพลิเอทิลีนต่ำๆ และโพลิสไตรีนต่ำๆ มีค่าต่ำกว่า 35.3 %, 27.4 %, และ 65.4 % ของคุณสมบัติเริ่มต้น

C485016 : MAJOR PETROCHEMISTRY
KEY WORD: PLASTIC RECYCLING / PLASTIC WASTE

NATTHAKAN JINTAPAYUNGKUL : PHYSICAL PROPERTIES OF LOCAL PLASTIC WASTE FOR RECYCLING POTENTIAL. THESIS ADVISOR : ASSO. PROF. KROEKCHAI SUKANJANAJTEE, Ph.D. 215 pp. ISBN 974-584-342-3

Mechanical properties and the change of properties of recycled plastic pellets, quantity and types of plastic waste, and structure of plastic recycling industries were studied. Data were obtained from a total of 48 dealers and plants. The majority of post-consumer plastic waste is of HDPE. A minimum of 66,150 tons of HDPE is recycled annually. The second important plastic waste is of PP of which 13,950 tons minimum is recycled annually. Only PE, PP, and PS are repelleted.

Quality of sorting was good as investigated by Differential Scanning Calorimetry. Tensile stress and impact strength of recycled pellets were determined. The minimum values for tensile stress of those made from PE (drinking water bottles), mixed PE, mixed PS, and mixed PP are 94.6%, 82.9%, 70.9%, and 81.3% of the original properties, respectively. The minimum values for impact strength of those made from PE (drinking water bottles), mixed PE, and mixed PS are 35.3 %, 27.4 %, and 65.4 % of the original properties, respectively.

ACKNOWLEDGEMENTS

I wish to express gratitude to my advisor, Associate Professor Kroekchai Sukanjanajee for his helpful advice and encouragement throughout the research. Especial gratitude are offered to Associate Professor Supawan Tantayanon, Dr.Sujitra Dhumrongvaraporn, and Dr.Nuanphun Chantasasiri for their help and suggestion.

I am so grateful to Department of Material Science, Chemical Technology, Faculty of Science, Chulalongkorn University, Department of Chemistry, Faculty of Science, Mahidol University, and Department of Industrial Chemistry, King Mongkut's Institute of Technology, North Bangkok for the use of equipment and instrument. I also thank the Bangkok Metropolitan Administration (BMA), plastic product fabricators, plastic waste processing factories and waste dealers for their data and samples and everyone who has given encouragement and assistance throughout the research.

Finally, I would like to express my greatest application to my family for their support and encouragement throughout the course.
