APPENDICES

Appendix A Assumptions, Definitions, and Calculations

In this work, the following assumptions were made:

1. All the gaseous behaviors obey the ideal gas law
2. The change in the system, pressure is very small and negligible.
3. The pressure in the system equals the atmospheric pressure (1 atm)

The total molar flow rate of the gaseous stream can be determined from the following equation:

$$N = q \times (P/RT) \quad (B.1)$$

where

q = total volumetric flow rate

P = total pressure of the system

R = gas constant (82.051 atm·mL·mol⁻¹·K⁻¹)

T = absolute ambient temperature (K)

The molar flow rate of each component can be obtained by multiplying its fraction derived from the gas chromatography analysis by the total molar flow rate.

The conversion is defined as:

$$\% \text{ Conversion} = \frac{\text{Mole reactant in} - \text{Mole reactant out}}{\text{Mole reactant in}} \times 100 \quad (B.2)$$

The first selectivity is defined as:

$$\% \text{ Selectivity} = \frac{P \times \text{Mole of } C_P \text{ produced}}{R \times \text{Mole of } C_R \text{ converted}} \times 100 \quad (B.3)$$

where

P = number of carbon atom in product

R = number of carbon atom in reactant

C_P = product that has carbon P atom

C_R = product that has carbon R atom

The second selectivity is defined as:

$$\% \text{ Selectivity of H}_2 = \frac{\text{Molar flow rate of H}_2 \text{ produced}}{\text{Rate of H reacted}} \times 100 \quad (\text{B.4})$$

To determine the energy efficiency of gliding arc discharge system, the specific energy consumption was calculated in a unit of electron-volt per molecule of converted carbon (eV/m_c) from the following equation:

$$\text{Specific energy consumption} = \frac{P \times 60}{1.602 \times 10^{-19} \times \tilde{N} \times M_C} \text{ eV/molecule of reactants converted} \quad (\text{B.5})$$

where

P = Power (W)

\tilde{N} = Avogadro's number = 6.02×10^{23} molecule·g-mole⁻¹

M_C = Rate of reactants in feed gas converted (g-mole·min⁻¹)

1 eV = 1.602×10^{-19} W

Appendix B Experimental data

CURRICULUM VITAE

Name: Mr. Chalermrat Akarawitoo

Date of Birth: April 26, 1982

Nationality: Thai

University Education:

2000-2004 Bachelor Degree of Industrial Chemistry, Faculty of Applied Science, King Mongkut's Institute of Technology North Bangkok, Bangkok, Thailand
