RESTAURANT WASTEWATER TREATMENT BY ELECTROCHEMICAL  
OXIDATION IN CONTINUOUS PROCESS

Mr. Songsak Klamklang

A Dissertation Submitted in Partial Fulfillment of the Requirements  
for the Degree of Doctor of Philosophy Program in Chemical Technology

Department of Chemical Technology

Faculty of Science

Chulalongkorn University

Academic year 2006

ISBN 974-14-3476-6

## Acknowledgements

I would like to express my sincere gratitude and appreciation to Professor Dr. Somsak Damronglerd, Professor Dr. Patrick Duverneuil and Associate Professor Dr. Kejvalee Pruksathorn, for providing me with the insights and guidance to recognize my mistakes and constant encouragement. I would also like to thank them for lending me adequate freedom and flexibility while working on my Ph.D. study.

I would like to thank Professor Dr. Pattarapan Prasassarakich for serving as chairman of the committee and also for some kindness helps during my Ph.D. study. Furthermore, I would like to thank Assistant Professor Dr. Hugues Vergnes and Dr. François Senocq for their keen observations regarding my work and for providing valuable suggests and for their care while I stayed at Toulouse, France. Assistant Professor Dr. Sangobtip Pongstabodee and Dr. Thawach Chatchupong have also been very supportive for my Ph.D. work. I would like to thank them for their guidance and for serving as members of my thesis committee.

I would like to acknowledge the Royal Golden Jubilee Ph.D. Program of the Thailand Research Fund and the Embassy of France in Thailand for the financial support to my Ph.D. work.

I wish to express my grateful appreciation to Department of Chemical Technology, Faculty of Science, Chulalongkorn University, Thailand. I also gratefully thank to Laboratoire de Génie Chimique and Centre Inter-universitaire de Recherche et d'Ingénierie des Matériaux, Ecole Nationale Supérieure des Ingénieurs en Arts Chimiques et Technologiques, Institut National Polytechnique de Toulouse, France.

A very special thank has expressed to my father, my mother, my family and my friends for their encouragement and love.

<b>Abstract (in Thai)</b> .....	iv
<b>Abstract (in English)</b> .....	v
<b>Acknowledgement</b> .....	vi
<b>Contents</b> .....	vii
<b>List of Tables</b> .....	x
<b>List of Figures</b> .....	xi
<b>Chapter 1 General Introduction</b> .....	1
1.1 Introduction.....	1
1.2 Objectives.....	3
1.3 The steps of work.....	4
<b>Chapter 2 Bibliography</b> .....	5
2.1 Wastewater.....	5
2.2 Restaurant wastewater.....	6
2.3 Wastewater treatment process.....	6
2.3.1 Physical treatment.....	7
2.3.2 Biological treatment.....	10
2.3.3 Chemical treatment.....	11
2.4 Electrochemical treatment.....	14
2.4.1 Electrocoagulation.....	14
2.4.2 Electroflotation.....	17
2.4.3 Electrochemical oxidation.....	18
2.5 Mechanisms of electrochemical oxidation.....	18
2.5.1 Electrochemical conversion.....	21
2.5.2 Electrochemical combustion.....	24
2.5.3 Electrochemical oxidation performance.....	27
2.6 Electrocatalytic electrodes.....	33
2.7 The influence of electrode material on process performance	36
2.8 SnO <sub>2</sub> type dimensionally stable anodes.....	40
2.8.1 Preparation of SnO <sub>2</sub> type dimensionally stable anodes.....	41
2.9 Chemical vapor deposition.....	48
2.9.1 Thermodynamics of chemical vapor deposition.....	51

2.9.2 Thermal chemical vapor deposition processes.....	53
2.9.3 Metal-organic chemical vapor deposition (MOCVD).....	54
2.9.4 Metal-organic chemical vapor deposition of tin oxide (SnO <sub>2</sub> ).....	55
2.9.5 Metal-organic chemical vapor deposition of iridium (Ir) and iridium oxide (IrO <sub>2</sub> ).....	57
<b>Chapter 3 Materials and Methods.....</b>	<b>61</b>
3.1. Chemicals.....	61
3.2. Substrate pretreatment.....	62
3.2.1. Stainless steel 316L.....	62
3.2.2. Borosilicate glass.....	62
3.2.3. Silicone wafer.....	62
3.2.4. Titanium.....	62
3.2.5. Tantalum.....	63
3.2.6. Tantalum carbide over tantalum.....	63
3.3. Deposition of TiO <sub>2</sub> by spray coating.....	63
3.4. Deposition SnO <sub>2</sub> by spray pyrolysis.....	64
3.5. Metal-organic chemical vapor deposition.....	64
3.5.1. Choice of precursor.....	66
3.5.2. Choice of substrate.....	66
3.5.3. Substrate placement.....	66
3.5.4. Deposition condition.....	67
3.5.5. Deposition characterization.....	69
3.6. Electrochemical oxidation.....	69
3.6.1. Batch electrochemical oxidation.....	69
3.6.2. Continuous electrochemical oxidation.....	71
3.6.3. Pollutant removal efficiency.....	73
<b>Chapter 4 Results and Discussion.....</b>	<b>74</b>
4.1 Preparation of specific electrodes.....	74
4.1.1 Treatment of substrates.....	74
4.1.2 Deposition of TiO <sub>2</sub> by spray coating.....	77
4.1.3 Deposition of SnO <sub>2</sub> by spray pyrolysis.....	77
4.1.4 Deposition of IrO <sub>2</sub> by MOCVD.....	78
4.1.5 Deposition of Ir by MOCVD.....	82
4.1.6 Deposition of SnO <sub>2</sub> by MOCVD.....	87

4.2	Activation of new electrodes.....	97
4.3	Application of SnO <sub>2</sub> /Ir/Ti specific electrodes in batch process with model solution.....	100
4.3.1	Influence of SnO <sub>2</sub> active film thickness.....	101
4.3.2	Kinetic investigation.....	103
4.3.3	Influence of current density.....	107
4.4	Application of SnO <sub>2</sub> /Ir/Ti specific electrodes for actual restaurant wastewater.....	109
4.4.1	Characterization of restaurant wastewater.....	109
4.4.2	Influence of current density.....	110
4.4.3	Influence of residence time.....	113
4.4.4	Influence of SnO <sub>2</sub> active film thickness.....	116
4.5	Treatment cost analysis of restaurant wastewater treatment by electrochemical oxidation.....	119
<b>Chapter 5 General Conclusion</b> .....		123
5.1	Electrode preparation.....	123
5.1.1	Deposition of TiO <sub>2</sub> by spray coating.....	123
5.1.2	Deposition of SnO <sub>2</sub> by spray pyrolysis.....	123
5.1.3	Deposition of IrO <sub>2</sub> by MOCVD.....	123
5.1.4	Deposition of Ir by MOCVD .....	124
5.1.5	Deposition of SnO <sub>2</sub> by MOCVD .....	125
5.2	Application of specific electrodes for actual restaurant wastewater.....	126
5.2.1	Application of specific electrodes in batch process with model solution .....	126
5.2.2	Kinetic investigation for batch process with model solution.....	126
5.2.3	Application of specific electrodes for actual restaurant wastewater.....	127
<b>References</b> .....		128
<b>Appendices</b> .....		135
Appendix A.....		136
Appendix B.....		150
<b>Biography</b> .....		157

## List of Tables

Table	Page
2-1 Properties of various organo-tin.....	56
2-2 Physical properties of iridium CVD precursors .....	59
3-1 Deposition conditions for IrO <sub>2</sub> , Ir and SnO <sub>2</sub> .....	67
3-2 Characteristics of model solution.....	70
3-3 Operating condition for batch electrochemical oxidation of model solution.....	70
3-4 Operating condition for continuous electrochemical oxidation.	72
4-1 Characterization of wastewater from Chulalongkorn University Student Canteen.....	109
4-2 Effect of current density on restaurant wastewater treatment cost by electrochemical oxidation.....	121
4-3 Effect of residence time on restaurant wastewater treatment cost by electrochemical oxidation.....	121
4-4 Effect of SnO <sub>2</sub> thickness on restaurant wastewater treatment cost by electrochemical oxidation.....	122
A-1 Sample and reagent quantities for various digestion vessels.....	140

## List of Figures

Figure		Page
2-1	Schematic of electrocoagulation.....	16
2-2	Electroflotation process.....	17
2-3	Generalized schema of the electrochemical conversion and combustion of organics with simultaneous oxygen evolution.....	20
2-4	Electrochemical corrosion rate of base metals as a function of $H_2SO_4$ concentration at anode potential of 2 V/SCE.....	28
2-5	Instantaneous current efficiency of various coating materials.....	29
2-6	Influence of current density on the degradation rate of phenol.....	32
2-7	The crystalline structure of $SnO_2$ .....	41
2-8	Schematic overview of a medium frequency (MF) powered twin magnetron reactive sputtering system.....	43
2-9	Cracking of $IrO_2$ layer by sol-gel dip coating technique.....	45
2-10	Schematic set-up for spray pyrolysis technique.....	47
2-11	Sequence of gas transport and reaction processes contributing to CVD film growth.....	50
2-12	Schematic diagram of chemical, transport and geometrical complexities involved in modeling CVD process.....	51
3-1	MOCVD apparatus.....	65
3-2	Schematic diagram of silicon wafer and actual substrates placement in MOCVD reactor.....	68
3-3	Schematic diagram of batch electrochemical oxidation apparatus.....	71
3-4	Schematic diagram of continuous electrochemical oxidation apparatus.....	72
3-5	Shimadzu TOC-5050A TOC analyzer.....	73
4-1	Roughness profile of 24 hr HF etched Ta substrate.....	75

4-2	Roughness profile of 1 hr hot-HCl etched Ti substrate.....	75
4-3	Average surface roughness of Ta substrates with various etching time by HF.....	76
4-4	Scanning electron micrographs of some substrates.....	76
4-5	Effect of $O_2$ /Ir(acac) <sub>3</sub> molar ratio on IrO <sub>2</sub> film growth rate at 400 °C and 25 Torr .....	79
4-6	X-Ray diffraction of IrO <sub>2</sub> coated Si wafer.....	80
4-7	Cross-sectional and surface microstructure of IrO <sub>2</sub> film over Si wafer.....	81
4-8	Effect of deposition temperature on deposition area of Ir film at 12 Torr and $O_2$ /(MeCp)Ir(COD) molar ratio of 1491±89....	83
4-9	Effect of deposition temperature on Ir film growth rate at 12 Torr and $O_2$ /(MeCp)Ir(COD) molar ratio of 1491±89.....	84
4-10	Effect of oxygen content in feed gas mixture on deposition area of Ir film at 300 °C and 12 Torr.....	84
4-11	Effect of oxygen molar ratio on Ir film growth rate at 300 °C and 12 Torr.....	85
4-12	Scanning electron micrographs of Ir film.....	86
4-13	X-Ray diffraction of Ir coated Ti substrate.....	86
4-14	Effect of feed gas composition on SnO <sub>2</sub> film growth rate at 380 °C and 15 Torr.....	87
4-15	The comparison of SnO <sub>2</sub> film thickness at each point in the reactor, when deposition temperature of 380 °C, deposition pressure of 15 Torr and $O_2$ /TET molar ratio of 1,200.....	88
4-16	X-Ray diffraction of SnO <sub>2</sub> film over Si wafer at 380 °C and 15 Torr.....	89
4-17	Effect of residence time on SnO <sub>2</sub> film growth rate at 380 °C and 15 Torr.....	94
4-18	Effect of substrate on SnO <sub>2</sub> film growth rate at 380 °C and 15 Torr.....	95
4-19	Surface and cross-sectional microstructure of SnO <sub>2</sub> film over various substrates.....	96
4-20	Activation of SnO <sub>2</sub> /Ir/Ti electrode, current density of 10 mA/cm <sup>2</sup> .....	98

4-21	Activation of SnO <sub>2</sub> /TaC/Ta electrode, current density of 10 mA/cm <sup>2</sup> .....	99
4-22	The SnO <sub>2</sub> /TaC/Ta after activation, current density of 10 mA/cm <sup>2</sup> .....	100
4-23	Total organic carbon degradation by using of SnO <sub>2</sub> /Ir/Ti, electrode surface area of 3.2 cm <sup>2</sup> and current density of 5 mA/cm <sup>2</sup> .....	101
4-24	Effect of SnO <sub>2</sub> layer thickness on TOC removal by using of SnO <sub>2</sub> /Ir/Ti, electrode surface area of 3.2 cm <sup>2</sup> and current density of 5 mA/cm <sup>2</sup> .....	102
4-25	Effect of SnO <sub>2</sub> layer thickness on TOC removal efficiency by using of SnO <sub>2</sub> /Ir/Ti, electrode surface area of 3.2 cm <sup>2</sup> and current density of 5 mA/cm <sup>2</sup> .....	103
4-26	TOC concentration profile of model solution when $t \leq 2$ hr by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron, electrode surface area of 3.2 cm <sup>2</sup> and current density of 5 mA/cm <sup>2</sup> .....	104
4-27	TOC concentration profile of model solution when $t > 2$ hr by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron, electrode surface area of 3.2 cm <sup>2</sup> and current density of 5 mA/cm <sup>2</sup> .....	106
4-28	Comparison of experimental data and kinetic model.....	106
4-29	Effect of current density on TOC removal by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron and electrode surface area of 3.2 cm <sup>2</sup> .....	107
4-30	Effect of charge loading to the system on TOC removal by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron and electrode surface area of 3.2 cm <sup>2</sup> .....	108
4-31	Effect of current density on TOC removal in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron and electrode surface area of 3.2 cm <sup>2</sup> .....	111

4-32	Effect of current density on TOC removal efficiency in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron and electrode surface area of 3.2 cm <sup>2</sup> .....	111
4-33	Effect of current density on COD removal in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron and electrode surface area of 3.2 cm <sup>2</sup> .....	112
4-34	Effect of current density on COD removal efficiency in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron and electrode surface area of 3.2 cm <sup>2</sup> .....	112
4-35	Effect of residence time on TOC removal in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron, current density 5 mA/cm <sup>2</sup> and electrode surface area of 3.2 cm <sup>2</sup> .....	114
4-36	Effect of residence time on TOC removal efficiency in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron, current density 5 mA/cm <sup>2</sup> and electrode surface area of 3.2 cm <sup>2</sup> .....	115
4-37	Effect of residence time on COD removal in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron, current density of 5 mA/cm <sup>2</sup> and electrode surface area of 3.2 cm <sup>2</sup> .....	115
4-38	Effect of residence time on COD removal efficiency in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, SnO <sub>2</sub> thickness of 1.8 micron, current density of 5 mA/cm <sup>2</sup> and electrode surface area of 3.2 cm <sup>2</sup> .....	116
4-39	Effect of SnO <sub>2</sub> layer thickness on TOC removal in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, current density of 5 mA/cm <sup>2</sup> and electrode surface area of 3.2 cm <sup>2</sup> .....	117

4-40	Effect of SnO <sub>2</sub> layer thickness on TOC removal efficiency in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, current density of 5 mA/cm <sup>2</sup> and electrode surface area of 3.2 cm <sup>2</sup> .....	118
4-41	Effect of SnO <sub>2</sub> layer thickness on COD removal in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, current density 5 mA/cm <sup>2</sup> and electrode surface area 3.2 cm <sup>2</sup> .....	118
4-42	Effect of SnO <sub>2</sub> layer thickness on COD removal efficiency in continuous restaurant wastewater treatment by using of SnO <sub>2</sub> /Ir/Ti, current density of 5 mA/cm <sup>2</sup> and electrode surface area of 3.2 cm <sup>2</sup> .....	119
