## ABSTRACT

# # ID 022340 : Major Health Systems Development

Key words: 30-Baht Scheme/attitude/utilization/satisfaction/registered/self referred patients  
SONAM RINCHEN: THESIS TITLE: THE 30-BAHT SCHEME: UTILIZATION OF THE GOLD CARD AND PATIENT SATISFACTION AT THE CHULALONGKORN MEMORIAL HOSPITAL. THESIS ADVISOR: ASSISTANT PROFESSOR SATHIRAKORN PONGPANICH, Ph.D. 101 pp. ISBN 974-9599-06-3

A cross-sectional descriptive study was carried from 3rd-28th February 2003 at Chulalongkorn Memorial Hospital. The objectives of the study were to examine utilization of the Gold Card among the 30-Baht patients, to describe the attitude towards the 30-Baht Scheme and to determine satisfaction with hospital services under this scheme.

The study was hospital based with a sample of 213 subjects were purposively determined as subjects. Two comparative groups (both 30-baht patients) were considered - registered and self-referred groups. Trained interviewers used pre-tested questionnaires to collect data, which included demographic features, attitude, utilization and satisfaction variables. Descriptive statistics as well as Non-parametric test, Chi-Square test and correlation were used to explain relationships and significant difference between the variables of interest in the two groups.

Women respondents represented 72.7% of the sample. A quarter of respondents is aged above 60 years. Generally, education level is low (51% primary grade) and unemployment is high (32%). The literacy rate is low in the self-referred group, and 43% do not earn income at all, yet they can afford to pay for the services at Chulalongkorn Hospital. The self-referred group prefers this Hospital because of skilled doctors and trust and confidence in care. Nearly 85% of them are willing to register at this Hospital if given an opportunity. 52% of respondents used the Gold Card only in 2002, while 26% never used so far. Very few (15%) have used more than 6 times. The attitude of the respondents towards the 30-baht scheme was moderate (2.58), while both groups did not seem to agree with continuity of the scheme, though they felt privileged of using the Gold card. There was a significant difference in attitudes between the groups ( $p < .001$ ). Satisfaction level was found high among the respondents (80.37%). Satisfaction in the care provided by doctors was accorded the highest rating in both the groups ( $>90\%$ ). And there was no significant difference in the satisfaction level between the registered and self-referred groups ( $p > .05$ ), though there is difference in attitudes. Satisfaction had weak positive relation with attitude. A significant difference was determined between the gold card utilization and payment methods ( $p < .001$ ).

Services of Chulalongkorn Hospital are regarded as highly satisfied by the 30-baht patients. In general, there seemed to be low utilization of the Gold Card among the registered group. Despite moderate attitudes towards the 30-Baht scheme, no variables seemed to deter the satisfaction level of all respondents. However, respondents were not happy with the waiting time. Nonetheless, high satisfaction level among the users reflects the efficiency and high quality care at the Chulalongkorn Memorial Hospital.

## Acknowledgement

My thesis will be incomplete, and it will be an unpleasant bias on my part if I do not remind myself to thank all those people who made my dreamy life a reality. This is my first academic masterpiece.

May I grab this opportunity to thank the following persons:

- Ajarn Sathirakorn - for being my mentor, guardian and for playing a directorial role in weaving my work to perfection. Your Art is ingrained in my heart, Ajarn.
- Ajarn Ong-arj - for all your time-tested wisdom and guidance that helped me see myself as an adult and professional person. You will be remembered always, Sir.
- Ajarn Nuntavan - for inculcating in me a sense of direction. I remain indebted.
- Ajarn Nintika - for always being kind to support me in the administrative matter. Your smiling face shall live afresh in my memory, Ajarn.
- Ajarn Marc - for filling my little cerebrum with critical thoughts. I will remember you whenever I am confused in life.
- Ajarn Valaikanya - for all your genuine efforts in equipping us with necessary skills in the public health field and beyond. I salute your support.
- Ajarn Suvajee - for your thoughtful advise and constant encouragement in my work and life. I shall treasure our friendship.
- Ajarn Prapapen - for your insightful wisdom and caring words. I respect your deeds and motherly supervision on us.
- Ajarn Wacharin - for your helping hand in bio-statistics, without which my life's p-value would be all the time more than .05. I appreciate your significant support.
- Ajarn Pete - for silently blessing us with computer skills. Thank you, Ajarn.
- Khun Paew - for making my life easier with all translation works and teaching me how to toy with SPSS. Our friendship will be cherished. Thank You, friend.
- Thinlay Dorji - for your utmost official and personal support.
- Sutthiluck - for helping me with the data collection. Without your help, I would not have graduated this year perhaps. My heartfelt gratitude to you.
- Nurlina - for consistently reminding me my goal and standing by me whenever I needed help. Your invaluable inspiration has influenced my work and life.

- Ketsomsuk - for your wise guidance and emotional support for which I am always grateful. You broadened the vision of my work and life.
- Madhav - for being my good friend. *Dandai bhat, dost!*
- Mon - for bring my friend, guide and supporter in my work.
- On - for reminding me what is meant by hard work. You remain my source of inspiration. Thank you for your hand that remains imprinted in my thesis work.
- Seri - for teaching me how to relax when I was down.
- Sutthat - for your intellectual support in my thesis.
- Akiri - for always remaining with me undeterred both in times of happiness and distress. My admiration for your support in my life.
- Khun Phon and Knew - for bearing with us and allowing us to use computer lab even on the weekends. I shall remember your help.

There are many that I wish to personally thank if time and space permits. There are others without whose help my work would not have been complete. My sincere thanks to Ajarn Jiruth, Head of Nursing, Khun Surirat, Khun Noi, and other staff at Chulalongkorn Hospital for their valuable contributions in the making of my thesis. I am also indebted to Ajarn Orasa and Khun Sripon of Ministry of Public Health for stretching their kind hands in feeding my thesis with relevant information.

I also take this opportunity to Thank my Ministry (in Bhutan) and Department of Technical and Economic Cooperation (Thailand) for giving me a lifetime chance to take up the Master's Degree course in this country.

Besides, I thank all those patients in hospital who kindly consented to be the part of my study. You all are the foundation of my thesis work. I ever remain grateful.

Lastly, I thank my parents, sisters, friends and well-wishers back home for praying me a good health and having faith in me and my work, without which I would not have traveled this far in life. Thank you all beyond sky and earth!

Sonam Rinchen

9. Reception of Gold Card .....	48
10. Utilization of Gold Card .....	48
11. Frequency of utilization of Gold Card .....	48
12. Rating for Chulalongkorn Hospital .....	49
13. Attitude of Respondents towards the 30-Baht Scheme .....	50
14. Satisfaction of Respondents with Hospital Services .....	56
15. Test of Relationship among Variables .....	61
16. Utilization of Gold Card/Hospital Services .....	64
17. Test of Difference among the Variables .....	66
18. Independent t-test .....	68
19. Difference in Attitude towards the 30-Baht Scheme .....	68
20. Difference in Satisfaction with Hospital Services .....	69
21. Interview with Health Official .....	70
22. Interview with Hospital Official .....	71
23. Field Observation .....	72

## Chapter V Discussion, Conclusion and Recommendation

1. Introduction .....	74
2. Salient Demographic Features .....	74
3. Self referred's Preference for Chulálongkorn Hospital .....	75
4. Utilization of Gold Card and Hospital Services .....	77
5. Attitude towards the 30-Baht Scheme .....	78
6. Relationship among Variables .....	78
7. Difference in Attitude among the Two Groups .....	79
8. Difference in Satisfaction among the Two groups .....	79

### Conclusion

1. Sample Features .....	80
2. Self Referred 30-Baht Patients .....	80
3. Attitude .....	81
4. Utilization of the Gold Card.....	81
5. Satisfaction .....	81
6. Relationship and Associations among Variables .....	81
7. Limitations .....	82
8. Recommendations .....	83
