**KNOWLEDGE OF MOTHERS/ CARE TAKERS ABOUT CEREBRAL PALSY
AND HOME MANAGEMENT FOR CEREBRAL PALSIED CHILD**

		Answer		
		True	False	Don't Know
1	Cerebral palsy is a disorder that affects motor skills(the ability to move in a coordinated and purposeful way),muscle tone ,and muscle movement It comes from brain damage, which happened before the baby was born ,at birth, or as a baby			
2	The possible causes of cerebral palsy are a lack of oxygen, premature birth , low birth weight ,infection , or central nervous system problem			
3	Cerebral palsy can not be cured but home management can help a child with CP lead a more functional life			
4	The contractures and deformities of the child can develop by inappropriate home management			
5	The normal child can sit by himself in 4 months			
6	The contractures and deformities can prevent by passive movement and stretching exercise every day			
7	Cerebral palsied child who could not sit need a seat to help him to sit			
8	Cerebral palsy children who could not do self care need to encourage by repeating practice			
9	We can carry the CP child in the same way as normal child
