## APPENDICES

### Appendix A Characterization of organically modified MMT

After modification of Na-MMT, sodium ions in the galleries of MMT were replaced by the quaternary ammonium ions of octadecylamine, a modifying agent, and the organically modified MMT (OC-MMT) was characterized by using FT-IR, XRD, and TGA.

#### FTIR

FTIR could be used for verifying the incorporation of a modifying agent into the galleries of MMT. Figure A1 showed the FT-IR spectra of a modifying agent, Na-MMT, and the organically modified MMT.

**Figure A1** FTIR spectra of Na-MMT, OC, and OC-MMT.

As shown in Figure A1, octadecylamine (OC) showed the important absorption peaks of N-H stretching, C-H stretching of methyl and methylene group at 3300, 2950, 2850 and 1430  $\text{cm}^{-1}$ , respectively. For the organically modified MMT obtained, the FT-IR spectra showed the combination between the characteristic peaks of inorganic Na-MMT and octadecylamine.

#### XRD

Besides FT-IR, XRD also provided strong evidence for the incorporation of a modifying agent into the MMT structure as well. The XRD analysis of Na-MMT and the organically modified MMT prepared using octadecylamine as a modifying agent were shown

in Figure A2. There was some little amount of Na-MMT or the retraction of MMT remaining in the modified OC-MMT as seen by the small peak at 2 Theta = 7.9 degrees.

**Figure A2** XRD patterns of Na-MMT, and OC-MMT.

From Figure A2, the peak position below 10-degree of 2 Theta of OC-MMT was shifted to lower degree relative to that of Na-MMT, suggesting that the spaces between the silicate layers were significantly expanded. This is due to the incorporation of a modifying agent into the galleries of MMT. The basal spacing calculated from the peak position of 2 Theta (degree) was listed in Table A1.

**Table A1** The basal spacing of Na-MMT, and OC-MMT.

MMT	Basal spacing (Å)
Na-MMT	12.41
OC-MMT	26.12

The results from XRD revealed that the basal spacing of Na-MMT obtained from this work was 12.41 Å (7.12 degree) which was slightly different from Thajaroen (2000), 12.13 Å. After modifying with octadecylamine, the basal spacing of OC-MMT was to be 26.12 Å (3.38 degree); however, there were some remained Na-MMT whose basal spacing of silicate layer retracted to 11.44 Å (7.72 degree) which was closed to that reported by Giannelis *et al.* (1996), 11.40 Å. The higher degree of basal spacing expansion generally

results in the higher opportunity of polymer intercalation, leading to the more possibility of layered-silicate deamination in polymer matrix.

#### TGA

The incorporation of a modifying agent into the galleries of MMT was also determined by using Thermogravimetric analysis. TGA curves of a modifying agent, Na-MMT and the organically modified MMT under  $N_2$  atmosphere up to  $800^\circ\text{C}$  were shown in Figure A3.

**Figure A3** TGA curves of OC, Na-MMT, and OC-MMT.

As shown in Figure 4.3, the degradation temperature ( $T_d$ ) obtained by derivative of OC was observed at about  $180^\circ\text{C}$  while that of Na-MMT was about  $630^\circ\text{C}$ . For OC-MMT, the obvious degradation temperature was around  $373^\circ\text{C}$ . This could confirm the improvement in thermal stability of a modifying agent incorporated in the galleries of MMT structure

**Figure G46** Resistance vs. time for nDPPyC3 under CO<sub>2</sub>:C<sub>2</sub>H<sub>4</sub> at the ratio of (a) 1:1 (b) 1:2 and (c) 1:3.

**Figure G47** Resistance vs. time for nDPPyC3 of 0.5mm thick under (a) CO<sub>2</sub>, (b) CH<sub>4</sub> and (c) C<sub>2</sub>H<sub>4</sub> at the gas pressure of 0.1 bars.

## Appendix H Characterization of nDPPyC3

nDPPyC3 was characterized by FTIR, XRD, and TGA as shown in Figure H1.

**Figure H1** (a) A FTIR spectrum, (b) An XRD pattern, and (c) A TGA curve under O<sub>2</sub> atmosphere for nDPPyC3.

The results of nDPPyC3 obtained from these following tests (see Figure H1) were corresponded to the results of DPPyC3, indicating that nDPPyC3 was still the nanocomposites containing intercalated OC-MMT and exfoliated Na-MMT.

## CURRICULUM VITAE

**Name:** Ms. Acharaporn Thuimthad

**Date of Birth:** December 06, 1979

**Nationality:** Thai

**University Education:**

1998-2002 Bachelor's Degree of Science in Chemistry, Faculty of science, Chulalongkorn University, Bangkok, Thailand.

**Presentation:**

1. Poster presentation, "Preparation and Characterization of Polypyrrole-Layered Silicate Nanocomposites", at the 8<sup>th</sup> Pacific Polymer Conference, November 24<sup>th</sup>-27<sup>th</sup>, 2003, Bangkok, Thailand.
