APPENDICES

Appendix A Calculation

A.1 Weight average of standard refinery gas

$$\overline{MW} = \frac{\sum G_i x (MW)_i}{\sum G_i}$$

From $PV_i = nRT$ and $n_i = \frac{G_i}{(MW)_i}$

Thus, $PV_i = \frac{G_i}{(MW)_i} RT$

$$G_i = V_i (MW)_i \times \frac{P}{RT}$$

Hence, $\sum G_i \times (MW)_i = \frac{\sum V_i (MW)_i}{\sum (MW)_i}$

A.2 Response factor (Schomberg, 1990)

Response factors for FID (Flame Ionization Detector) were calculated on the weight basis as shown in the following equation using methane as the standard component.

$$f_i = \frac{A_{std}}{A_i} \times \frac{G_i}{G_{std}} \times f_{std}$$

Where f_i is the response factor of the component

f_{std} is the response factor of the standard

A_i is the area of component

A_{std} is the area of standard

G_i is the mass of the component

G_{std} is the mass of the standard, which is methane in this case

$$\text{From } G_i = V_i (MW)_i \times \frac{P}{RT}$$

$$\text{So, } \frac{G_i}{G_{std}} = \frac{V_i (MW)_i}{V_{std} (MW)_{std}}$$

The mass fraction (m_i) of any component, m_i can be calculated as the following equation

$$m_i = \frac{A_i \times f_i}{\sum A_i \times f_i}$$

$$\text{Thus, } m_i = \frac{A_i \left[\frac{A_{std}}{A_i} \times \frac{G_i}{G_{std}} \times f_{std} \right]}{\sum A_i \left[\frac{A_{std}}{A_i} \times \frac{G_i}{G_{std}} \times f_{std} \right]}$$

Therefore,

$$m_i = \frac{G_i}{\sum G_i}$$

Volume fraction (V)

From $V = \frac{V_i}{\sum V_i}$ and

$$PV_i = \frac{G_i}{(MW)_i} RT$$

$$V_i = \frac{G_i}{(MW)_i} \times \frac{RT}{P}$$

Hence, $V = \frac{\frac{G_i}{(MW)_i} \times \frac{RT}{P}}{\sum \frac{G_i}{(MW)_i} \times \frac{RT}{P}}$

From $m_i = \frac{G_i}{\sum G_i}$

So,

$$V = \frac{\frac{m_i}{(MW)_i}}{\sum \frac{m_i}{(MW)_i}}$$

Appendix B Raw data

B.1 Effect of using superacid catalyst (SO_4^{2-} / commercial ZrO_2) on pyrolyzed products
