Dissolution Data

The cumulative percentage of drug dissolved from theophylline sustained-release tablets prepared by wet granulation, spray drying, fluidized-bed coating and from commercial products, Theo-Dur® and Nuelin®, are presented in Tables 37-51.

Dissolution rate constant (Kd) for tablet of individual product is obtained from the slope of the plot between the logarithm of amount of undissolved theophylline against the corresponding time, For example, dissolution rate constant of Theo-Dur® is calcualted as follows.

Time (hr)	A*	100-A	log (100-A)	r
0.25	4.94	95.06	1.978
