

CHAPTER VII

RECOMMENDATION FOR FUTURE WORK

For further study on application of the process, the following studies are recommended:

- (1) To find out the material that will be endured the erosion at anode.
- (2) To find the relationship of current density and pollutant removal efficiency.
- (3) An intensive experiments should be performed in connection with an optimum cell design.
- (4) To find out the less expensive chemicals to increase conductivity and electrochemical reaction in pollutant removal from specific type of waste water.
