การศึกษานิวมาโทฟิลล์ผสมสีในประเทศไทย

นางสาวอัมพา มานพ

พฤกษศาสตร์

2519

บทคัดย่อ

การศึกษานี้ได้ทำการสำรวจตัวอย่างแห่งของมอสสีในวงศ์นิวมาโทฟิลล์
ซึ่งเก็บรวบรวมไว้ที่กรมป่าไม้ และ หอพรรณไม้ แผนกพฤกษศาสตร์ บางเขน ซึ่งเก็บ
มาจากทุกภาคของประเทศไทย ประมาณ 600 ตัวอย่าง มีจำนวน 40 ชนิด จากลักษณะ
ทางสัณฐานวิทยาของมอสแต่ละชนิด ได้จัดเรียบเรียงเป็นรูปวิธาน (Key) สำหรับใช้
วิเคราะห์มอสสีในวงศ์นี้ และทำแผนที่แสดงการกระจายของมอสสีในวงศ์นี้ในประเทศไทย

Thesis Title : Studies in Sematophyllous Mosses in
Thailand.

Name : Miss Ompha Manop

Department : Botany

Academic year: 1976

ABSTRACT

Under this project of study, the dried specimens were provided by the Forest Herbarium, Royal Forest Department, Bangkok, (B.K.F.) and the Bangkok Herbarium of the Department of Agriculture (B.K.). Of 600 known exsiccats, forty species were systematically studied, a tentative key was made, and also their distribution were mapped.

vi

ACKNOWLEDGEMENT

I wish to express my gratitude, appreciation and indebtedness to Professor Kasin suvat~~ab~~andhu and Assistant Professor Dr. Obchant Thaithong, my supervisor for their continuous guidance, sincere interest and supervision not only in the preparation of this thesis, but throughout the entire course of my graduate training, without which this work would not have been possible.

I also thank Dr. Tem Smitinand, the curator of the Forest Herbarium, Royal Forest Department, Bangkok, for his knowledgeable advice and permission to use the Herbarium; also Miss Umpai Yangboonkird, the curator at the Herbarium of the Department of Agriculture, for her kind permission to use the Herbarium.

Special thanks are due to Mr. Thaweesakdi Boonkerd, Mr. Pichit Sukthanyalux, Mr. Pjong Tunwatanakul, Mr. Prapat Shinvirapun and all of my friends for their generous help and friendly assistance.
