ABSTRACT

A study of the syntheses and reactions of 3-amino-4,4-dimethylsteroids by using cholesterol as starting material has afforded seven new compounds : 4,4-dimethylcholest-5-en-3-one oxime, the epimeric 3-amino-4,4-dimethylcholest-5-ene hydrochlorides, N-salicylidene derivatives of the epimeric 3-amino-4,4-dimethylcholest-5-enes, 4,4-dimethylcholestan- $\beta$ -ylamine hydrochloride, and an isomer of 4,4-dimethylcholest-5-en-3 $\alpha$ -ylamine. These 3-amino-4,4-dimethylsteroids were synthesized by reduction of the corresponding oximes which were obtained from cholesterol. Besides, 4,4-dimethylcholestan- $\beta$ -ylamine hydrochloride has also been prepared by catalytic hydrogenation, and an isomer of 4,4-dimethylcholest-5-en-3 $\alpha$ -ylamine from catalytic hydrogenation of 4,4-dimethylcholest-5-en-3 $\alpha$ -ylamine hydrochloride. These results could prove valuable in the steroidal chemistry. The steric course of the deamination of these amines should be determined in the future.

ACKNOWLEDGEMENT

The author wishes to express her deep gratitude to Professor Stang Monkolsuk for giving her the opportunity to carry out her studies at the Faculty of Medical Science, University of Medical Sciences; to Dr. Kenneth Jewers, SEATO Professor of Organic Chemistry, who has given her valuable assistance and guidance until this thesis is completed.

It is a great pleasure that the author acknowledges the financial aid rendered by the Chulalongkorn University Graduate School, the Thai Airways International Limited, and the South-East Asia Treaty Organization. She is indebted to Dr. Dep Shiengthong, Assistant Professor of Chulalongkorn University, and Dr. Pradit Cheuychit, First Grade Lecturer of the Faculty of Medical Science, who gave useful advices in the absence of Dr. Kenneth Jewers.

She also wishes to express her indebtedness to the Department of Science, Ministry of Industry, for having given her assistance in accomplishing elemental analysis and Infra-red spectroscopy.

The author also acknowledges the help of the staff and undergraduates of the Faculty of Medical Science and friends.
