กลั่นประทุม ปัญญาปิง : การพัฒนาแบบจำลองทำนายด้านสิ่งแวดล้อมสำหรับน้ำเสียที่เกิดจาก
การผลิตกระดาษอุตสาหกรรมด้วยเทคนิคการวิเคราะห์หลายตัวแปร (Development of a
Predictive Environmental Model for Wastewater from Industrial Paper
Production using Multivariate Analysis Technique) อ.ที่ปรึกษา : ดร.วิทย์
สุนทรนันท์ อ.ที่ปรึกษาร่วม : Daniel J. Watts, Ph.D. และ Peter B. Lederman,
Ph.D. 310 หน้า. ISBN 974-17-4958-9

น้ำเสียจากการผลิตกระดาษ นับเป็นสิ่งทำลายที่สำคัญอย่างหนึ่งด้านสิ่งแวดล้อม ความเข้าใจที่ดีเกี่ยวกับ
การผลิตกระดาษอุตสาหกรรมจากชุดข้อมูลปัจจัยการผลิต และความสัมพันธ์ของข้อมูลปัจจัยการผลิตดังกล่าวกับ
กระบวนการผลิต นำไปสู่ความสามารถในการทำนายภาระน้ำเสีย และสาเหตุรากฐาน ของการเกิดภาระน้ำเสียที่
จำเป็นต้องจัดการ เพื่อป้องกันไม่ใ้ระบบบำบัดน้ำเสียเกิดภาวะล้มเหลวในการบำบัด การจำแนกและหาความ
สัมพันธ์ของชุดข้อมูลวัตถุดิบที่ใช้ในการผลิตและภาระน้ำเสียที่เกิดขึ้น เป็นจุดที่สนใจของงานวิจัยนี้

เทคนิคทางคณิตศาสตร์ด้านการวิเคราะห์หลายตัวแปร ประกอบด้วยการวิเคราะห์ตัวประกอบร่วม และ
การวิเคราะห์ถดถอยพหุคูณ ถูกนำมาใช้พัฒนาแบบจำลองที่ไม่เพียงบอกลักษณะความสัมพันธ์ภายในกลุ่มของ
ตัวแปรที่เป็นปัจจัยการผลิต เช่น เชื้อ สารเคมี น้ำ และไฟฟ้า ยังทำนายความสัมพันธ์ระหว่างภาระน้ำเสียกับภาวะ
ของปัจจัยการผลิตที่ใช้ แบบจำลองข้างต้นถูกพัฒนาขึ้น จากข้อมูลที่สามารถวัดได้จากกระบวนการผลิตกระดาษ
อุตสาหกรรม ระหว่างเดือนมกราคม 2544 - กันยายน 2545 สำหรับผลิตภัณฑ์กระดาษอุตสาหกรรม 3 ชนิดจาก
โรงงานที่ศึกษาได้แก่ กระดาษยิปซัมด้านหน้า กระดาษยิปซัมด้านหลัง และกระดาษกล่องขาวเคลือบที่มีขนาดน้ำ
หนักต่างกัน

ผลการศึกษาพบว่า สิ่งปนเปื้อนจากน้ำเยื่อที่ป้อน การควบคุมการเติมสารเคมีและการตกค้างของเส้นใย
ละเอียดและสารแต่งเติมที่ไม่ดี และการเปลี่ยนเกรดกระดาษที่บ่อยมากเกินไป รวมทั้งการกำหนดเวลาเดิน
เครื่องจักรระหว่างโรงงานเศษกระดาษและเครื่องจักรทำกระดาษ ทำให้เกิดภาระน้ำเสียที่สูงมาก ได้แก่ ภาระ
สารแขวนลอยในน้ำ ภาระสารละลายในน้ำทั้งหมด ภาระความต้องการออกซิเจนทางชีวภาพ และภาระความ
ต้องการออกซิเจนทางเคมี การจัดการแบบต่างๆที่ตอบสนองการควบคุมน้ำเสีย ได้ถูกเสนอแนะจากสิ่งที่ได้จาก
แบบจำลองที่พัฒนาขึ้น

 TECHNIQUE / FACTOR ANALYSIS / MULTIPLE REGRESSION ANALYSIS /
 INDUSTRIAL PAPER PRODUCTION

KLINPRATOOM PANYAPING : DEVELOPMENT OF A PREDICTIVE
 ENVIRONMENTAL MODEL FOR WASTEWATER FROM INDUSTRIAL
 PAPER PRODUCTION, THESIS ADVISOR : WIT SOONTARANUN,
 Ph.D., THESIS COADVISORS: DANIEL J. WATTS, Ph.D., and PETER B.
 LEDERMAN, Ph.D., 310 pp. ISBN 974-17-4958-9.

Wastewater from papermaking provides an important environmental challenge. Improved understanding of industrial paper production through the set of material inputs used and their interactions with the process itself may lead to the ability to predict the change in wastewater loadings. It should lead as well to the root causes of wastewater load generation that should be managed in order to prevent upsetting of the wastewater treatment system. The identification and derivation of these relationships between material supplied and wastewater load is the focus of this work.

The mathematical multivariate technique consisting of factor analysis (FA) and multiple regression analysis (MRA) was used to develop a model that not only characterizes the interrelationships among the material input variables (pulp, chemicals, water, and electric power) but also leads to the prediction of the relationships between wastewater generation and production conditions. The models were developed based on measurable data obtained from a papermaking facility during January, 2001 to September, 2002 for the three major classes of paper products from the study site (Gypsum face liner board, GF; Gypsum back liner board, GB; and Duplex coated board, DP).

It was found that the contaminants from the feed stock, poor control of addition of chemicals and poor retention of fines and filler, and too frequent change over of paper grade including scheduling of machine operations between paper machine and wastepaper plant contribute greatly to high wastewater loads, namely suspended solids, total dissolved solids, biological oxygen demand, and chemical oxygen demand. Various management responses for wastewater control were suggested based on the findings from this model development.

Field of Study Environmental Management

Acknowledgements

This dissertation would not be accomplished without contributions from many people. First of all, the author would like to express her highest respect and deepest thanks to her parents for giving not only her life with ultimate gentle warmth of love and care but also her inspirations. Specifically, on the occasion of six anniversary of her parents in 2003 and 2004, this is a very special gift for her parents' birthday.

The author also would like to particularly express her sincerest thanks to her advisor for providing guidance and valuable discussions in conducting this research since the beginning and her co-advisors for invaluable comments and suggestions and editing up to the last minute. Many thanks go to experts in related fields from the Departments of Statistics and Mathematics, Chulalongkorn University and the Department of Pulp and Paper Technology, Asian Institute of Technology for their kind supports regarding the detailed knowledge necessary for this work. Great appreciation goes to all of the staff at the paper mill studied, especially the production manager and the chiefs of staff of each production unit for their generous supports through information and fruitful discussion throughout this study. Without their help, this dissertation would never have become a reality.

Furthermore, much gratitude is due to the chairman and all the members of the committee for providing their comment and to make this research more valuable, and to all of the author's former professors for providing the knowledge and wisdom.

Special thanks go to the International Postgraduate Program in Environmental Management, National Research Center on Environmental and Hazardous Waste Management (NRCEHWM), Chulalongkorn University for providing an educational scholarship and to the Department of Environmental Engineering, Rajamangala Institute of Technology (RIT), Chiang Mai campus for allowing the author to study for an advanced degree.

Sincere thanks also go to the Director of the NRCEHWM, the Director of the study program, and all staff, in particular, the library officers, for their lovely support, all students, and many friends both internal and external to the program for their friendship and cheerfulness.

Lastly, the heart-whole thanks are due to all members of "Ban Chantaramon"; the author's beloved family for the waves of their love and understanding, and encouraging her to break through any impediment and reach the final goal.

6.39 Relationship between ZSS Load of DP 350 and F ₁ , F ₂ and F ₆	239
6.40 Relationship between ZTDS Load of DP 350 and F ₁ , F ₂ , F ₄ , and F ₅	240
6.41 Relationship between ZCOD Load of DP 350 and F ₄	241
6.42 Relationship between ZBOD Load of DP 350 and F ₄	242
6.43 Relationship between ZSS Load of DP 310 and F ₂ ,F ₃ and F ₅	243
6.44 Relationship between ZTDS Load of DP 310 and F ₅ and F ₆	244

LIST OF FIGRUES (Cont.)

	Page
6.45 Relationship between ZCOD Load of DP 310 and F_2 and F_4	245
6.46 Relationship between ZBOD Load of DP 310 and F_2 and F_4	246
6.47 Relationship between ZSS Load of DP 270 and F_1 and F_2	247
6.48 Relationship between ZTDS Load of DP 270 and F_1 , F_2 , F_4 , and F_5	248
6.49 Relationship between ZCOD Load of DP 270 and F_1	249
6.50 Relationship between ZBOD Load of DP 270 and F_1	250
6.51 Result of Calculation for SS and TDS Loads of Total DP 450.....	255
6.52 Result of Calculation for COD and BOD Loads of Total DP 450.....	256
6.53 Result of Calculation for SS and TDS Loads of Total DP 400.....	257
6.54 Result of Calculation for COD and BOD Loads of Total DP 400.....	258
6.55 Result of Calculation for SS and TDS Loads of Total DP 350.....	259
6.56 Result of Calculation for COD and BOD Loads of Total DP 350.....	260
6.57 Result of Calculation for SS and TDS Loads of Total DP 310.....	261
6.58 Result of Calculation for COD and BOD Loads of Total DP 310.....	262
6.59 Result of Calculation for SS and TDS Loads of Total DP 310.....	263
6.60 Result of Calculation for COD and BOD Loads of Total DP 310.....	264
7.1 Schematic of wastewater load generation and its management	266

GLOSSARY

Main Abbreviations and Terms

A ₁ - A ₅ , and A ₉	Various Types of Wastepaper
A ₆ - A ₈	Types of Virgin Pulp
GP	Gypsum liner board production
GF	Gypsum face liner board
GB	Gypsum back liner board
DP	Duplex coated board production
SS	Suspended Solids
TDS	Total Dissolved Solids
BOD	Biological Oxygen Demand
COD	Chemical Oxygen Demand
FA	Factor Analysis
MRA	Multiple Regression Analysis
kWhr/adt	Unit of energy consumption of paper in terms of air dry metric ton
Wet end operations	The first part of paper machine is the operation in the wet state where paper is formed.
Stock	The mixture of pulp slurry consists of pulp fillers, various papermaking materials, and water.
Furnish	The combination of all of the material used to make paper is in the wet end operations.
Broke	The out-of-specification of paper, sheet or web breaks, and paper trimmings are often reused in the paper mill.
White water	The water contains fines, fiber, chemicals, and water that is used in papermaking through the re-circulated white water system.
WWTP	Wastewater Treatment Plant
WW	Wastewater
FL	Fiber loss
