ABSTRACT

4371021063: PETROCHEMICAL TECHNOLOGY PROGRAM

Suchada Passararat: Development of A Device to Measure
Hydrogen in The Presence of Moist Chlorine

Thesis Advisors: Asst. Prof. Thirasak Kirksomboon and Prof. Frank
R. Steward. 62 pp. ISBN 974-03-1590-9

Keywords: Amperometric Sensor/Membrane/Derakane® resin

Recently, an amperometric sensor attached with a hydrogen-selective membrane made of epoxy vinyl ester based resin, Derakane® 470-300, coated on a Teflon® sheet, has been proposed to measure hydrogen concentration in the presence of moist chlorine. The response of the sensor is not satisfactory. The Derakane® layer gives a slow response time, and the brittleness of the resin makes the thin membrane easy to crack. The cracking allows Cl₂ to get into the sensor and nullifies the principle of the sensor. As a result, a sandwich membrane having an active layer less than 0.10 mm thick between two sheets of Teflon® was introduced in this study. It was believed that the sandwich technique would enhance transmembrane flux and physical strength of the membrane. However, no research has been carried out on the ability of the thin-active-layer membrane to withstand chlorine. Thus, sandwich membranes of two types of Derakane® resin; 470-300 and 8084 were prepared. The H₂ and Cl₂ permeability coefficients of the membranes in H₂-Ar atmosphere and Cl₂ atmosphere at 25, 50 and 80°C were determined. Mixed gas experiments were carried out at 80°C to determine the effect of the presence of chlorine on the permeation of hydrogen through the membrane. The selectivity was calculated by the permeability ratio of hydrogen and chlorine. From the experimental results, both types of membrane allow chlorine to pass through but Derakane® 8084 showed higher selectivity for hydrogen than Derakane® 470-300 in the range of temperature studied. A decrease in hydrogen and chlorine permeability coefficients was found in the experiment of 5% H₂ and 95% Cl₂ mixed gas system. The permeability coefficient of hydrogen is lower in 5%H₂/Cl₂ than in the mixed gas containing 1% H₂ whereas the chlorine permeability coefficient is higher.

บทคัดย่อ

สุชาดา ภัตสรารัตน์ : การศึกษาเยื่อเลือกผ่านสำหรับอุปกรณ์ในการวัดความเข้มข้นของก๊าซไฮโดรเจนในก๊าซคลอรีนชื้น (Development of A Device to Measure Hydrogen Concentration in The Presence of Moist Chlorine : Influence of A Novel Membrane) อ.ที่ปรึกษา : ศ. ดร. แฟรงค์ อาร์ สจิวเวิร์ต (Prof. Dr. Frank R. Steward) และ ผศ. ดร. ชีรศักดิ์ ฤกษ์สมบูรณ์ 62 หน้า ISBN 974-03-1590-9

เยื่อเลือกผ่านทำด้วย เตราเคนเคลือบบนแผ่นเทฟลอน ได้นำมาติดตั้งในอุปกรณ์ในการวัดปริมาณก๊าซไฮโดรเจนในก๊าซคลอรีนชื้น แต่การตอบสนองของอุปกรณ์ไม่เป็นที่น่าพอใจ เนื่องจากตราเคนชะลอการตอบสนองของอุปกรณ์ และยังแตกง่ายทำให้ก๊าซคลอรีนแพร่เข้าไปภายในเซนเซอร์ได้ ทำความเสียหายให้แก่กระบวนการวัดปริมาณก๊าซไฮโดรเจน ดังนั้นโครงการนี้จึงได้เลือกศึกษา เยื่อเลือกผ่านที่มีลักษณะเป็นแซนด์วิชมีตราเคนความหนาน้อยกว่า 0.10 มม. อยู่ระหว่างแผ่นเทฟลอน 2 แผ่น ปริมาณก๊าซไฮโดรเจนที่ผ่านเยื่อเลือกผ่านชนิดนี้จะมากกว่าชนิดเคลือบ อย่างไรก็ตามยังไม่มีการศึกษาความสามารถในการต้านทานก๊าซคลอรีนของเยื่อเลือกผ่านชนิดนี้

ในโครงการศึกษานี้ ได้ทำการทดสอบหาความสามารถในการแพร่ผ่านของก๊าซไฮโดรเจนและคลอรีนผ่านเยื่อเลือกผ่านที่มีลักษณะแบบแซนด์วิชซึ่งทำด้วย เตราเคน 2 ชนิดคือ เตราเคน 470-300 และ เตราเคน 8084 ที่อุณหภูมิ 25, 50 และ 80 องศาเซลเซียส รวมทั้งได้ทดสอบด้วยก๊าซผสมระหว่างไฮโดรเจนและคลอรีนที่มีปริมาณก๊าซไฮโดรเจน 1% และ 5% ที่อุณหภูมิ 80 องศาเซลเซียส เพื่อศึกษาการแทรกผ่านของก๊าซไฮโดรเจนในก๊าซคลอรีน จากการศึกษาพบว่าก๊าซคลอรีนสามารถแพร่ผ่านเยื่อเลือกผ่านแบบแซนด์วิชทั้งสองชนิดได้ โดยเยื่อเลือกผ่านที่ทำด้วยตราเคน 8084 มีอัตราการเลือกผ่านก๊าซไฮโดรเจนมากกว่า และอุณหภูมิมีผลกระทบต่ออัตราการเลือกผ่านของเยื่อเลือกผ่านตราเคน 8084 มากกว่าของตราเคน 470-300 ความสามารถในการแพร่ผ่านของทั้งก๊าซไฮโดรเจนและคลอรีนกับเยื่อเลือกผ่านตราเคน 8084 น้อยลงเมื่อทดลองกับก๊าซผสม อีกทั้งยังพบว่า ความสามารถในการแพร่ผ่านของก๊าซไฮโดรเจนเมื่อก๊าซผสมมีปริมาณไฮโดรเจน 1% มากกว่าเมื่อใช้ก๊าซผสมมีปริมาณไฮโดรเจน 5% แต่ความสามารถในการแพร่ผ่านของก๊าซคลอรีนจะมากกว่าเมื่อก๊าซผสมมีปริมาณก๊าซไฮโดรเจนมากกว่า

ACKNOWLEDGEMENTS

It is my honor to study at the Petroleum and Petrochemical College, Chulalongkorn University. I would like to take this opportunity to thank the college for accepting me and also giving me a full scholarship that covered the tuition fee. Without the scholarship, I would not have a chance to study in one of the very best graduate schools for chemical engineering in Thailand.

As well, I would like to express my deepest gratitude to my supervisor, Dr. Frank R. Steward, for giving me an opportunity to carry out this research project at the Centre for Nuclear Energy Research (CNER), Fredericton, New Brunswick, Canada. It was a priceless experience for me to live in a place that has totally different culture from the place I call home. It makes me appreciate the love of my family and my friends more as well as making me proud to be a Thai. It was the wonderful journey as I can see the wide world for myself and learn how to live on my own for the first time. However, I believe that my life in Fredericton would not be as delightful without the love and care of Dr. Steward and his family. I could not thank them enough for that.

The helpful guidance and suggestions of Dr. David R. Morris, Dr. Thirasak Rirksomboon, Dr. Dongfan Yang and Ms. Josephine Bullerwell will not be forgotten as well. Without them, this project would not be completed.

Big thank goes to Mr. David Rouison, a graduate student at the department of chemical engineering, the University of New Brunswick, for supplying MEKP catalyst to prepare the sandwich membranes.

My great journey would not be as precious without the Little Thai community in Fredericton; Pan, Toei, Nouie, Pond, May, Bude, David, and Leong. I am so blessed to meet such wonderful people like them. I would like to thank them for always making me feel like home and always there for me through the rough time of my life. To other friends in Fredericton, I really have a wonderful time with you and you will not forget the good times we had together there.

The useful help of my friends in Thailand should not be forgotten as well. My life would be in misery without them. Their true friendship has been my great treasure.

To my mom and dad, it is my great honor to be your daughter. I am so blessed to have you beside me through the rough time of my life. Your love helps me get through all troubles and makes me want to be a good person. Your devotion gave me many good chances in life that not-so-rich parents can give to their child. You made me believe that no love is greater and purer than parentlove. I would not accomplish anything without your love and support. I would like to thank you and tell you that I love you.
