ABSTRACT

4471005063: PETROCHEMICAL TECHNOLOGY PROGRAM

Apipong Chitvarodom: Advanced Oxidation Process for Wastewater Treatment.

Thesis Advisors: Dr. Kitipat Seimanond, Dr. Sirirat Jitkarnka, and Dr. Vivian Thammongkol, 59 pp. ISBN 974-17-2273-7

Keywords: Advanced oxidation process; Fenton

Industrial wastewater treatment is important for removing pollutants before the wastewater is released into the environment. Advanced oxidation process (AOP) based on the generation of highly reactive hydroxyl radicals is an important method employed in wastewater treatment. There are various types of AOP such as air/H₂O₂, Fenton, and photo-Fenton. In this study, an aqueous solution of 1% ethanol and 0.2% isopropanol was used as the simulated wastewater generated from a polyethylene plant. Fenton/air and Fenton processes were selected as treatment methods. Various parameters that affect AOP were studied. The concentrations of simulated pollutants and TOC were reduced along the time-on-stream and reduced even further when higher air flow rates and concentrations of H₂O₂ were used. A mathematical model combining the effects of evaporation and chemical oxidation was adapted and improved from a previous work. The proposed mathematical model for the Fenton process gave a closely fit with the experimental data, however, the model prediction for the Fenton/Air process did not fit. The enormous over-prediction of the Fenton/Air model was probably due to the assumption of evaporation.

บทคัดย่อ

อภิพงษ์ จิตต์วโรดม: การบำบัดน้ำเสียด้วยกระบวนการแอดวานซ์ออกซิเดชัน (Advanced Oxidation Process for Wastewater Treatment) อ. ที่ปรึกษา ดร. กิติพัฒน์ สีมานนท์ ดร. ศิริรัตน์ จิตการคำ และ ดร. วิวรรณ ธรรมมงคล 59 หน้า ISBN 974-17-2273-7

การบำบัดน้ำเสียจากอุตสาหกรรมมีความเพื่อกำจัดสารที่เป็นมลพิษเป็นสิ่งสำคัญ ก่อนที่จะปล่อยน้ำทิ้งไปสู่สิ่งแวดล้อม กระบวนการแอดวานซ์ออกซิเดชันโดยใช้หลักการสร้างไฮดรอกซิลเรดิคัลที่มีความไวทางปฏิกิริยาสูงเป็นวิธีสำคัญในการบำบัดน้ำทิ้ง กระบวนการนี้แบ่งออกเป็นหลายประเภท เช่น กระบวนการที่ใช้อากาศกับไฮโดรเจนเปอร์ออกไซด์ กระบวนการเฟนตัน และโฟโตเฟนตัน ในงานวิจัยนี้ น้ำเสียจำลองจากโรงงานโพลีเอทิลีนที่ใช้ในการศึกษา ประกอบด้วย เอทานอล 1 เปอร์เซ็นต์โดยน้ำหนัก และ ไอโซโพรพานอล 0.2 เปอร์เซ็นต์โดยน้ำหนัก กระบวนการเฟนตันกับอากาศ และเฟนตัน เป็นวิธีบำบัดน้ำทิ้งเพื่อศึกษาตัวแปรที่ส่งผลกับระบบกำจัดน้ำเสีย ผลการศึกษาพบว่าความเข้มข้นของสารมลพิษจำลอง และค่าTOCภายในสารไฮโดรคาร์บอนและในน้ำเสียนั้นมีปริมาณลดลงเมื่อใช้เวลานานขึ้นและเมื่อเพิ่มอัตราการไหลของอากาศและความเข้มข้นของไฮโดรเจนเปอร์ออกไซด์ นอกจากนี้ แบบจำลองทางคณิตศาสตร์จากงานที่แล้ถูกสร้างขึ้นโดยรวมผลกระทบของการระเหยและปฏิกิริยาออกซิเดชัน เพื่อนำไปพัฒนาและประยุกต์ใช้ในงานต่อไป ผลของการจำลองทางคณิตศาสตร์ของกระบวนการเฟนตันพบว่ามีความใกล้เคียงกับผลที่ได้จากการทดลอง แต่สำหรับกระบวนการเฟนตันกับอากาศมีความแตกต่างจากผลการทดลอง ซึ่งอาจจะเป็นผลมาจากการสมมติฐานในกระบวนการระเหย

ACKNOWLEDGEMENTS

This thesis work was partially funded by Postgraduate Education and Research Programs in Petroleum and Petrochemical Technology (PPT Consortium).

I would like to express my sincere appreciation to my advisors, Dr. Kitipat Siemanond, Dr. Sirirat Jitkarnka, and Dr. Vivan Thammongkol. Without them, this thesis might not be occurred. This work would not have been possible, if the following people had not been.

Under their guidance, I successfully overcame many difficulties. I also extend my appreciation to all staff members of the Petroleum and Petrochemical College and all of my friends for their assistance.

Finally, I would like to extend my whole-hearted gratitude to my family and my friends for their love, encouragement, and measureless support.
