KEY WORD: Triblock Copolymer/ Swelling Effect/ Immiscible Blends/

Drop Breakup/ Drop Coalescence

Ong-arj Amornpornvivat: The Effect of Triblock Copolymer

on Drop Breakup and Coalescence of Immiscible Blends.

Thesis Advisors: Prof. Alexander M. Jamieson and Assoc.

Prof. Anuvat Sirivat, 117 pp. ISBN 974-331-184-6

The effect of shear rate and triblock copolymer on blend morphology of three immiscible blends: PS/PI, HDPE/PI and PVAc/PI were investigated. Poly(styrene-b-isoprene-b-styrene) triblock copolymer was used as the compatibilizer. Drop size decreased with increasing shear rate because of the imbalance between the viscous force and the interfacial tension force. Inversely, the PI drop size became larger after the reduction in shear rate. This was because of the coalescence behavior. The drop size of PS/PI system had the smallest size at any shear rates whereas the largest drop size belonged to those of the HDPE/PI blend, as dictated by the interfacial tension parameter. For the effect of triblock copolymer on blend morphology, addition of the block copolymer led to a significant reduction in PI particle size because of the steric hindrance and the swelling effect between the PS segment of block copolymer and the matrix. For the coalescence measurement, the drop size of HDPE/PI, PS/PI and PVAc/PI with 5% SIS triblock copolymer were increased 4%, 1% and 6%, respectively. This was because of the PS/PI system has the highest swelling (S = 0.91) whereas the lowest value belongs to the PVAc/PI system (S = -25.90). Moreover, the saturated block copolymers of all blends were about 2%.

บทคัดย่อ

นาของอาจ อมรพรวิวัฒน์ : อิทธิพลของไตรบลี้อกโคพอลิเมอร์ต่อพฤติกรรมของการแตกตัวและ การรวมตัวของพอลิเมอร์ผสมที่ไม่เป็นเนื้อเคียวกัน (Effect of Triblock Copolymer on Drop Breakup and Coalescence of Immiscible Blends). อ.ที่ปรึกษา : ศ.คร. อเล็กซานเคอร์ เอ็ม เจมีสัน และ รศ.คร. อนุวัฒน์ ศิริวัฒน์ 117 หน้า ISBN 974-331-184-6

งานวิจัยนี้ศึกษาและค้นคว้าอิทธิพลของการเฉือนและไตรบล็อคโคพอลิเมอร์ต่อโครง สร้างภายในของสารผสมที่ไม่เป็นเนื้อเคียวกัน อันได้แก่ พอลิเอททีลีนความหนาแน่นสูง/พอลิไอ-โซพรีน . พอลิสไตรีน/พอลิไอโซพรีน และพอลิไวนิลอะซีเตต/พอลิไอโซพรีน โดย พอลิเสไตรีน-บล็อก-พอลิไอโซพรีน-บล็อก-พอลิสไตรีน) ทำหน้าที่เป็นสารเสริมความเข้ากันได้ระหว่างสาร 2 ชนิด. เราพบว่าอนุภาคทรงกลมมีขนาดเล็กลงเมื่ออัตราเร็วของการเฉือนมีค่าสูงขึ้นซึ่งเกิดเนื่องมา จากความไม่สมคุลระหว่างแรงที่พยายามยึดอนุภาคทรงกลมและแรงที่พยายามรักษารูปร่างของ อนุภาค. ในทางกลับกัน, เราพบว่าอนุภาคจะมีขนาดใหญ่ขึ้นเมื่ออัตราเร็วของการเฉือนลดลงเนื่อง อนุภาคทรงกลมของพอลิสไตรีน/พอลิไอโซพรีนมีขนาดเล็กที่สุดใน จากพฤติกรรมการรวมตัว. ขณะที่ขนาดของพอลิเอททีลีน/พอลิไอโซพรีนมีค่ามากที่สุด. สำหรับอิทธิพลของไตรบล็อคโคพอ เราพบว่าใตรบล็อคโคพอถิเมอร์ทำหน้าที่เป็นสารถคขนาคของอนุภาคเนื่องจากการเกิด ความเกะกะและการบวมตัวระหว่างส่วนของพอลิสไตรีนในบล็อคโคพอลิเมอร์และสารหนิดหลัก ดังจะเห็นได้จากผลการทคลองว่า พอลิสไตรีน/พอลิไอโซพรีน/ไตรบล็อคโคพอลิเมอร์ 5 เปอร์-ซึ่งมีค่าการบวมตัวสูงที่สุดนั้นมีอัตราการเพิ่มขนาดของอนุภาคทรงกลมเนื่องการรวมตัว เพียง 1 เปอร์เซ็นต์ ในขณะที่พอลิไวนิลอะซีเตต/พอลิไอโซพรีน/ไตรบล็อกโคพอลิเมอร์ 5 เปอร์-เซนต์ มีอัตราการเพิ่มขนาดของอนุภาคถึง 6 เท่าเนื่องจากมีค่าการบวมตัวต่ำที่สุด.

ACKNOWLEDGEMENTS

The author would like to give a special thank to his U.S. advisor, Prof. Alexander M. Jamieson, who gave some recommendations on the research. He is also deeply indebted to his Thai advisor, Assoc. Prof. Anuvat Sirivat, who not only originated this thesis work, but also gave intensive suggestions, invaluable guidance, constructive advice, and vital helps throughout the research work.

He greatly appreciates all Professors who have tendered invaluable knowledge to his at the Petroleum and Petrochemical College, Chulalongkorn University.

Finally, sincerest appreciation is to his family for their love, understanding, encouragement and financial support for his education.
