Keywords: Detergency / Microemulsion / Winsor type III / Oily soil

Detergency is the process of removal of unwanted material from a solid surface by contact with a surfactant solution. It is hypothesized that both ultra-low interfacial tension and high solubilization play importance roles in promoting detergency efficiency. The objective of this study was to investigate the relationship between the phase diagram and the efficiency of detergency for microemulsion system with low salinity. A mixed surfactant system of 0.5% alkyldiphenyloxide disulfonated (ADPODS), 5% sodiumdioctyl sulfosuccinate (AOT) and 3% sorbitan monooleate (Span 80) was found to exhibit Winsor type III microemulsion at 0.5% salinity. In using this formulation, the detergency performance increased with increasing active surfactant concentration, and optimum oily soil removal was found to be at around 0.1% active surfactant. The result showed that the studied formulation could remove more than 80% oil. Increasing the amount of rinsing water did not significantly affect the detergency performance. However, the detergency performance increased with salinity, and maximum oil removal was found to be at 3% NaCl.

บทคัดย่อ

นางสาวพรรณทิภา รัชตเวชกุล : การซักฟอกคราบน้ำมันโดยวิธีการไมโครอิมัลชัน (Detergency of Oily Soil by Microemulsion) อ. ที่ปรึกษา: รศ. ดร. สุเมธ ชวเดช, ศ. ดร. จอห์น เอฟ สแกมฮอร์น, ผศ. ดร.บุญรัชต์ กิตยานันท์ และ ดร. จันทรา ทองคำเกา 48 หน้า ISBN 974-9651-99-5

การซักฟอกเป็นกระบวนการกำจัดวัสดุที่ไม่ต้องการออกจากผิวของแข็ง โดยสัมผัสของสารละลายที่มีสารซักฟอก โดยมีสมมุติฐานว่าทั้งแรงดึงผิวที่ต่ำมากและการละลายที่สูงมีบทบาทสำคัญในการซักล้าง วัตถุประสงค์ของการศึกษาค้นคว้าครั้งนี้ คือ เพื่อหาความสัมพันธ์ระหว่างเฟสไดอะแกรมและประสิทธิภาพในการซักล้างของระบบไมโครอิมัลชันที่เกลือต่ำ

สูตรสารลดแรงดึงผิวผสมของน้ำมันเครื่อง ประกอบด้วย อัลคิล ไดฟีนิลออกไซด์ไดซัลโฟเนต (Alkyl diphenyl oxide disulfonate) หรือเอดีพีโอดีเอส (ADPODS) และไดออกทิลซัลโฟซซิเนต (Dioctyl oxide disulfonate) หรือ เอโอที (AOT) และซอร์บิแทน โมโนโอเลอเตต (Sorbitan monooleate) หรือ สเปน 80 (Span 80) พบว่า 0.5% ADPODS, 5% AOT, 3% Span 80 สามารถเกิดไมโครอิมัลชัน วินเซอร์ชนิดที่ III โดยใช้เกลือ 0.5 % ในการใช้สูตรนี้ ประสิทธิภาพการซักล้างเพิ่มขึ้นเมื่อความเข้มข้นของสารลดแรงดึงผิวผสมมากขึ้น และพบว่าจุดที่เหมาะสมในการกำจัดคราบน้ำมันอยู่ที่ 0.1 % ผลการทดลองแสดงให้เห็นว่าสูตรที่ใช้สามารถกำจัดคราบน้ำมันได้มากกว่า 80 % การเพิ่มปริมาณน้ำล้างไม่มีผลต่อประสิทธิภาพการซักล้าง อย่างไรก็ตาม ประสิทธิภาพการซักล้างเพิ่มขึ้นตามเกลือที่ใช้และคราบน้ำมันถูกกำจัดออกมากที่สุดที่เกลือ 3 %

ACKNOWLEDGEMENTS

This work would not have been possible without the assistance of the following individuals and organizations.

First of all, the author is deeply indebted to Assoc. Prof. Sumaeth Chavadej, Professor John F. Scamehorn, Dr. Chatra Tongcumpou and Asst. Prof. Boonyarach Kitiyanon as thesis advisors, for providing constructive guidance and comments as well as encouragement throughout this thesis work.

I am very grateful to Postgraduate Education and Research Programs in Petroleum and Petrochemical Technology (PPT Consortium) under The Ministry of Education and The Graduate Program of Thailand Research Fund for providing a partial scholarship and a research grant, respectively.

This work was also financially supported by The Research Unit : Applied Surfactants for Separation and Pollution Control under the Ratchadapisake Somphoke Fund, Chulalongkorn University.

Special thanks also extend to all of the Petroleum and Petrochemical College's staff for their assistance.

ABBREVIATIONS

ADPODS	Alkyl diphenyl oxide disulfonate
AOT	Aerosol-OT or dioctyl sodium sulfosuccinate
EACN	Equivalent alkane carbon number
HLB	Hydrophilic-lypophilic balance
IFT	Interfacial tension (mN/m)
IFT _{m/o}	Interfacial tension between middle phase and excess oil phase (mN/m)
IFT _{m/w}	Interfacial tension between middle phase and excess water phase (mN/m)
IFT _{o/w}	Interfacial tension between oil and water (mN/m)
O/W	Oil-in-water microemulsion
W/O	Water-in-oil microemulsion
PIT	Phase inversion temperature
S*	Optimum salinity (wt%)
SP*	Optimum solubilization parameter (ml/g)
SP	Solubilization parameter (ml/g)
Sp _o	Solubilization parameter of oil (ml/g)
SP _w	Solubilization parameter of water (ml/g)

LIST OF SYMBOLS

θ	Contact angle (degree)
ρ	Density (g/ml)
d	Diameter (mm)
$\gamma_{O/M}$	Interfacial tension between excess oil phase and middle phase (mN/m)
$\gamma_{W/M}$	Interfacial tension between excess water phase and middle phase (mN/m)
γ_{OB}	Interfacial tension at the liquid soil-bath interface (mN/m)
γ_{OS}	Interfacial tension at the liquid soil-substrate interface (mN/m)
γ_{SB}	Interfacial tension at the substrate-bath interface (mN/m)
