## APPENDICES

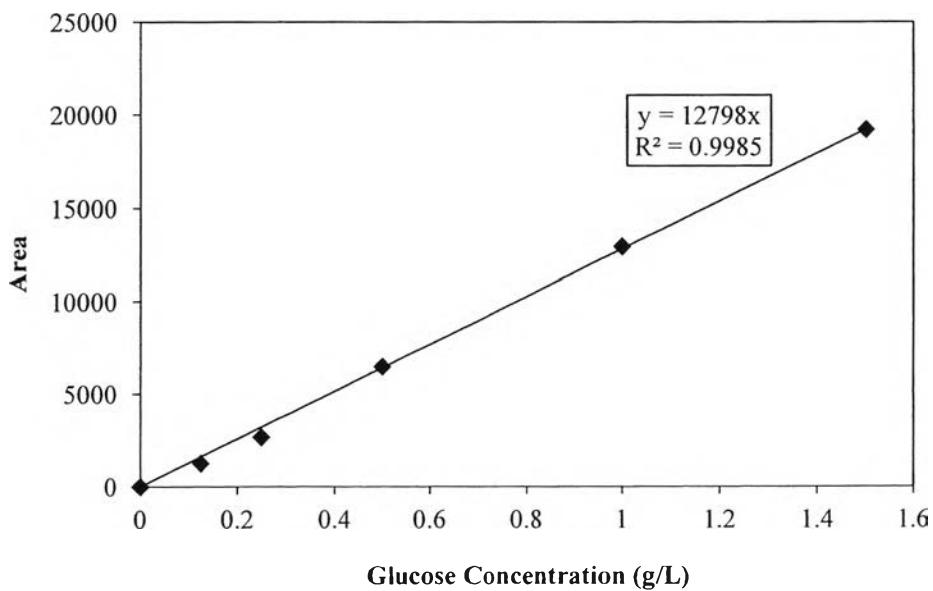

### Appendix A Standard Calibration Curve

#### 1. Glucose Calibration Curve

**Figure A1** The relationship between glucose concentration (g/L) and area.

#### 2. Cellobiose Calibration Curve

**Figure A2** The relationship between cellobiose concentration (g/L) and area.

**Table A1** Glucose calibration curve

<b>Glucose concentration (g/L)</b>	<b>area(glucose)</b>
0	0
0.125	1255.945
0.25	2672.915
0.5	6481.374
1.0	12930.928
1.5	19197.000

**Table A2** Cellobiose calibration curve

<b>Cellobiose concentration (g/L)</b>	<b>area(cellobiose)</b>
0	0
0.125	1656.000
0.25	3796.000
0.5	8631.456
1.0	19405.130
1.5	28096.500

## Appendix B Media for Microorganisms

### 1. 65 modified DSMZ broth medium 2

Approximate Formula\* Per Liter

Carboxymethyl Cellulose (CMC)	5.0	g
Yeast extract	4.0	g
Malt extract	10.0	g

Dissolve and adjust pH to 7.2

Autoclave at 121 °C and pressure at 15 pounds/square inch for 15 minutes

### 2. 65 modified DSMZ agar medium 2

Approximate Formula\* Per Liter

Carboxymethyl cellulose (CMC)	5.0	g
Yeast extract	4.0	g
Malt extract	10.0	g
Agar	12.0	g

Dissolve and adjust pH to 7.2

Autoclave at 121°C and pressure at 15 pounds/square inch for 15 minutes

## Appendix C Reagent Preparations

### 1. 0.85%(w/v) NaCl in 1000 mL

Sodium chloride (NaCl)	8.5	g
Distilled water	1000	mL

### 2. Hydrochloric acid 1 N in 100 mL

Hydrochloric acid (HCl conc.)	8.29	mL
Distilled water	91.71	mL

### 3. Sodium hydroxide 0.5 N in 1000 mL

Sodium hydroxide (NaOH)	5.0	g
Distilled water	1000	mL

### 4. Sulfuric acid 0.72 N in 1000 mL

Sulfuric acid (H <sub>2</sub> SO <sub>4</sub> conc.)	72	mL
Distilled water	28	mL

## Appendix D Bacteria Concentration

Bacteria concentration was determined using total nitrogen test kit.

### 1. The bacteria concentration from enzymatic hydrolysis

During enzymatic hydrolysis, bacteria growth was monitored by withdrawing samples from the hydrolysis reactor periodically. Solid that obtained from centrifuging of the sample, contained of corncob and bacteria. Method that can calculate weight of bacteria and corncob is shown in equation D1.

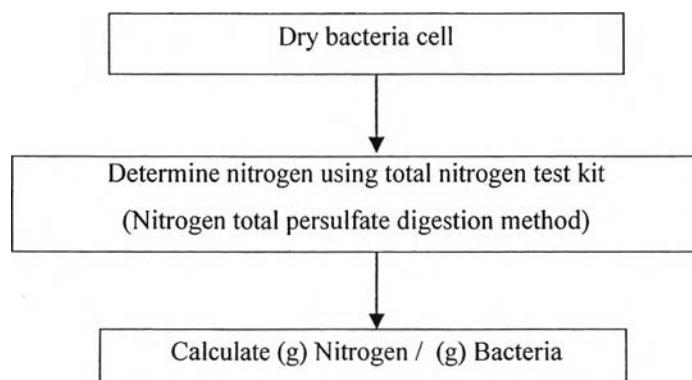

$$\text{wt. Solid} = \text{wt. Corncob} + \text{wt. Bacteria} \quad (\text{D1})$$

Then, a concentration of bacteria was determined by the total nitrogen test kit.

$$\text{wt. Bacteria} = \frac{\text{g Nitrogen contained in sample}}{(\text{g Nitrogen} / 1 \text{ g Bacteria})} \quad (\text{D2})$$

#### 1.1 The amount of nitrogen in bacteria

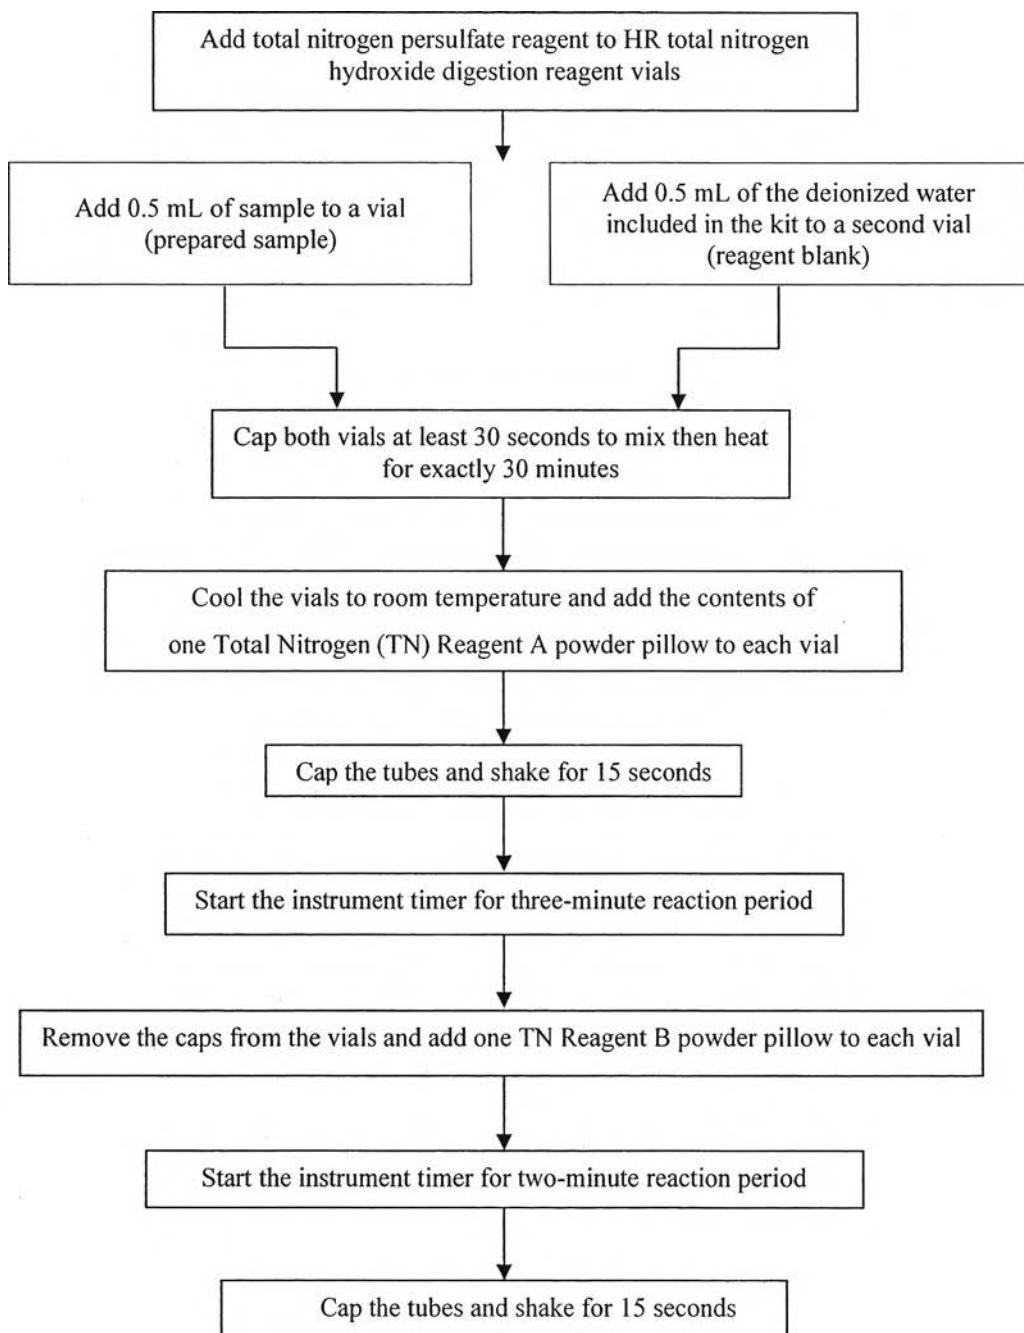

The amount of nitrogen in each strain was determined in triplicates by using the total nitrogen test kit. Figure F1 shows procedure for determination

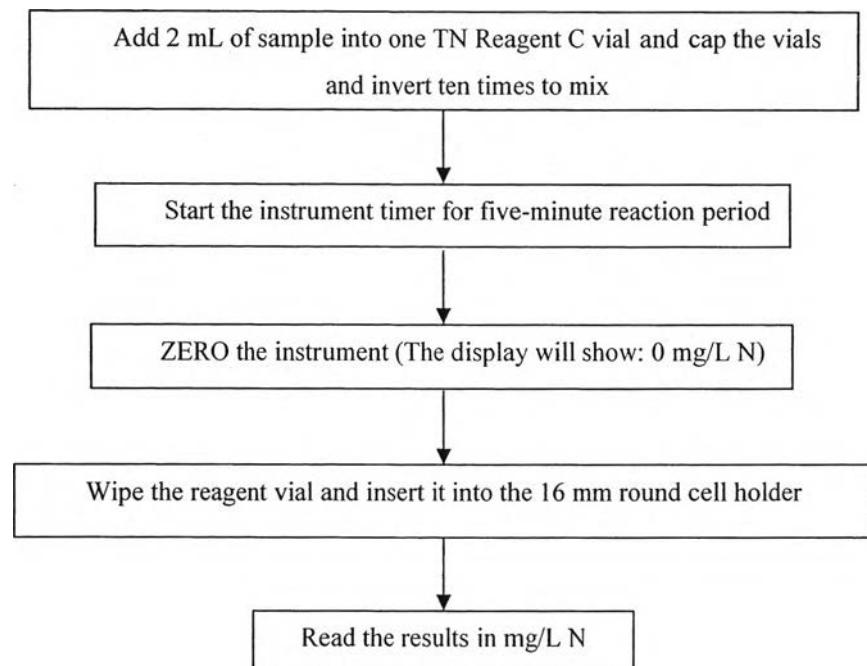

**Figure D1** Diagram for determination the amount of nitrogen in bacteria.

### Procedure

Nitrogen total persulfate digestion method is conducted in order to check amount of nitrogen which directly related to amount of bacteria during hydrolysis.

**Figure D2** Procedure for analyzing amount of nitrogen.

**Figure D2** Procedure for analyzing amount of nitrogen (continued).

## Appendix E Experiment Data of Enzymatic Hydrolysis

**Table E1** Glucose produced and cellobiose remaining from the hydrolysis of 40 mesh particle size cassava residue and strain A 002 bacteria at 30 °C.

## CURRICULUM VITAE

**Name:** Ms. Pitcha Wongskeo

**Date of Birth:** March 15, 1988

**Nationality:** Thai

**University Education:**

2005-2008 Bachelor Degree of Chemical Engineering, Department of Chemical Engineering, Faculty of Engineering, King Mongkut's Institute of Technology Ladkrabang, Bangkok, Thailand

**Work Experience:**

2009 Position: Process Engineer (Student Internship)  
Company: Esso (Thailand) Public Co., Ltd

**Proceedings:**

1. Wongskeo P., Rangsuvigit P., and Chavadej, S., (2012, April 11-13) Glucose Evolution from Cassava Residue by Microbial Hydrolysis Using Bacteria Isolated from Thai Higher Termites. Poster presentation at ICCBEE 2012 : International Conference on Chemical, Biological and Environmental Engineering, Venice, Italy.
2. Wongskeo, P., Rangsuvigit, P., and Chavadej, S., (2012, April 24) Glucose Evolution from Cassava Residue by Microbial Hydrolysis Using Bacteria Isolated from Thai Higher Termites. Proceedings of The 3<sup>rd</sup> Research Symposium on Petroleum, Petrochemicals, and Advanced Materials and The 18<sup>th</sup> PPC Symposium on Petroleum, Petrochemicals, and Polymers, Bangkok, Thailand.
