Prame Punnaruttanakun: Pyrolysis of Oil Sludge from an API Separator

Thesis's Advisors: Asst. Prof. Pramoch Rangsunvigit,

Asst. Prof. Vissanu Meeyoo, Assoc. Prof. Thirasak Rirkksomboon,

Dr. Boonyarach Kitiyanan, and Dr. Chatvalee Kalambaheti,

79 pp. ISBN 974-17-2297-4

Keywords: Pyrolysis; Oil sludge; API separator sludge

Typically, API separator sludge can be handled via combustion and/or recycling into reusable oils. However, it has been found that such methods cause secondary pollutants. Recently, pyrolysis has been proven to be an alternative for disposal of this sludge. In this study, we investigated the API separator sludge obtained from an oil company in Thailand. Experiments were carried out by means of thermogravimetric analysis at different heating rates of 5, 10 and 20°C•min<sup>-1</sup>. The weight loss data were then scrutinized for kinetic analysis. Results showed that typical derivative curves of the sludge consist of two major peaks. The first peak was found between 230-270°C while the other was found between 400-415°C. The former was resulted from the volatilization of free light volatile compounds existing in the sludge and the latter was attributed to the volatilization and main pyrolysis. The pyrolyzed products were confirmed by the mass spectroscopy results. Hydrogen and acetylene were found to be the main species in the pyrolysis products. The pseudo bi-component model showed a good fit with the experimental data.

## บทคัดย่อ

เปรม ภูณรัตน์กุล: ไพโรไลซิสของกากตะกอนน้ำมันจากบ่อแยก API (Pyrolysis of Oil Sludge from an API Separator) อ. ที่ปรึกษา: ผศ. ปราโมช รังสรรค์วิจิตร ผศ. วิษณุ มีอยู่ รศ. ธีระศักดิ์ ฤกษ์สมบูรณ์ ดร. บุญยรัชต์ กิตยานันท์ และ ดร. ชัชวาลี กะถัมพะเทติ 79 หน้า ISBN 974-17-2297-4

โดยหลักการทั่วไปกากตะกอนน้ำมันจากถังแยก API สามารถถูกกำจัดได้โดยผ่านกระบวนการเผาไหม้ และ/หรือ การเปลี่ยนสภาพเป็นผลิตภัณฑ์น้ำมันที่สามารถนำกลับมาใช้ประโยชน์ได้อีก อย่างไรก็ตามวิธีการดังกล่าวมา สามารถก่อให้เกิดสารที่เป็นมลพิษขั้นทุติยภูมิได้ เมื่อไม่นานมานี้ กระบวนการไพโรไลซิสได้ถูกพิสูจน์แล้วว่าเป็นอีกกระบวนการหนึ่งที่ดีสำหรับการกำจัดกากตะกอนน้ำมันชนิดนี้ งานวิจัยฉบับนี้ได้ทำการศึกษาปฏิกิริยาไพโรไลซิสกับกากตะกอนน้ำมันจากบ่อแยก API ของบริษัทน้ำมันปิโตรเลียมแห่งหนึ่งในประเทศไทย การทดลองนี้ทำการศึกษาโดยใช้วิธีการวิเคราะห์เชิงความร้อน (Thermogravimetric Analysis, TGA) ที่อัตราการความร้อน 5 10 และ 20 องศาเซลเซียสต่อนาที ข้อมูลน้ำหนักที่สูญเสียไปของกากตะกอนน้ำมันจากบ่อแยก API ถูกนำมาวิเคราะห์ทางจลนศาสตร์ จากผลการทดลองพบว่า เส้นโค้งอัตราการเปลี่ยนแปลงน้ำหนักของกากตะกอนน้ำมันเทียบกับอุณหภูมิมีค่าสูงสุดสองค่า ซึ่งค่าสูงสุดค่าแรกอยู่ระหว่างอุณหภูมิ 230 ถึง 270 องศาเซลเซียส ในขณะที่อีกค่าหนึ่งอยู่ระหว่างอุณหภูมิ 400 ถึง 415 องศาเซลเซียส ส่วนแรกจะเป็นผลจาก กระบวนการระเหยของสารองค์ประกอบระเหยง่ายอิสระที่อยู่ในกากตะกอนน้ำมัน สำหรับส่วนหลังสืบเนื่องมาจากกระบวนการระเหย และถือว่าเป็นปฏิกิริยาไพโรไลซิสหลัก ผลิตภัณฑ์ที่ได้จากปฏิกิริยาไพโรไลซิสถูกยืนยันโดยผลจากการวิเคราะห์แยกเชิงมวล (Mass Spectroscopy) จากการตรวจสอบพบว่า ก๊าซไฮโดรเจน และก๊าซอะเซทิลีน เป็นผลิตภัณฑ์หลักที่ได้จากปฏิกิริยาไพโรไลซิสหลัก สำหรับการศึกษาวงจรทางจลนพลศาสตร์ของปฏิกิริยาไพโรไลซิสของกากตะกอนน้ำมันจากบ่อแยก API ทำได้โดยใช้แบบจำลองทางคณิตศาสตร์ ชนิดองค์ประกอบเทียมสององค์ประกอบ ผลการทดสอบพบว่า ค่าการคำนวณที่ได้จากแบบจำลองทางคณิตศาสตร์เทียบเท่ากับข้อมูลที่ได้จากการทดลอง

## ACKNOWLEDGEMENTS

This thesis could not have successfully been possible and complete without the invaluable helps of the following individuals and organizations.

First of all I would like to express my sincere gratitude to Asst. Prof. Pramoch Rangsunvigit, Asst. Prof. Vissanu Meeyoo, Assoc. Prof. Thirasak Rirksomboon, Dr. Boonyarach Kitiyanan, and Dr. Chatvatee Kalambaheti for their invaluable guidance, understanding, and constant encouragement throughout the course of this research. Their positive attitude significantly contributed to inspiring and maintaining my enthusiasm in the field.

I am grateful for the partial scholarship and partial funding of the thesis work provided by Postgraduate Education and Research Programs in Petroleum and Petrochemical Technology (PPT Consortium). I wish to thank all the staffs at the PTT Public Co, Ltd. for all necessarily contributed knowledge, financial support throughout the study, and their kind assistance and cooperation. I would like to take this important opportunity to thank all of my friends for their unforgettable friendship. Further more, I would also specially like to thank Mr. Sitthiphong Pengpanich, Mr. Puchong Thipkhuntod, Mr. Pree Enkvetchakul, and Mr. Manoch Limsukhon who helped, contributed, and gave me the knowledge for developing computer program and mathematical modeling.

Last, my deepest appreciation and whole-hearted gratitude are everlastingly dedicated to my beloved family whose endless love, support, and understanding play the greatest role in my success.

## LIST OF TABLES

TABLE		PAGE
2.1	Typical properties and characteristics of wood derived pyrolysis oil	14
2.2	The properties and composition of bio-oil produced from Bio Therm <sup>TM</sup> pilot plant, derived from three different biomass feedstocks	15
2.3	Similarities between grade-2 diesel fuel and some bio-oil/diesel fuel	17
2.4	TA methods related to properties of a substance	19
4.1	Proximate analysis of sewage sludge, oil sludge, and API separator sludge	33
4.2	Heating values of coal, dry sewage sludge, wet sewage sludge, oil sludge and API separator sludge	34
4.3	TGA analysis data of sewage sludge, oil sludge, and API separator sludge	36
4.4	The possibility identification for mass spectra of light hydrocarbon gases from API separator sludge pyrolysis	37
4.5	Commonly used functional forms of $f(x)$	44
4.6	Kinetic parameters of the pseudo bi-component model and mean relative error for the API separator sludge pyrolysis at 5, 10, and $20^{\circ}\text{C} \cdot \text{min}^{-1}$	50
4.7	The relationship between pre-exponential factor (A) and temperature [=] kelvin of 5, 10, and $20^{\circ}\text{C} \cdot \text{min}^{-1}$ heating rates	51
B1	The maximum peak temperature of first and second pyrolysis reaction of non-ionic surfactant/API separator sludge system compared with API separator sludge (no surfactant) at heating rate of 5, 10, and $20^{\circ}\text{C} \cdot \text{min}^{-1}$	76

<b>TABLE</b>		<b>PAGE</b>
B2	Observation of upper surface after using several chemicals for removing oil from oily sludge model	77
B3	Experimental condition and percentage of removal oil from oily sludge model (the ratio of sand to oil was 50 g to 10 mL) by Emplilan NP6 amd Emplilan KB7 at various concentration	78

**LIST OF SYMBOLS**

$A_i$	Arrhenius's constant of reaction I
$\beta$	Heating rate
$E_{ai}$	Activation energy of reaction i
$f_i$	Mass fraction of component i
$k$	Rate coefficient
$n$	Reaction order
$R$	Gas constant
$r_A$	Reaction rate of component A
$T$	Absolute temperature (K)
$T_H$	Characteristic heating time
$T_R$	Characteristic reaction time
$T_{ref}$	Absolute referenced temperature
$t$	Time
$W_e$	Final mass percentage of material
$W_i$	Mass percentage of sample at any time
$W_o$	Initial mass percentage of material
$\Phi$	Heating rate
